INFORMATION CENTER

CURRENT VERSION INFORMATION:

WorldsAway Macintosh Application Version: 1.0

INFORMATION CENTER

README

GENERAL INFORMATION:

Before you load the WorldsAway application, please read the Software License Agreement which you'll find by clicking the "WorldsAway Software" icon from the GO AWAY menu page.

[**INFORMATION CENTER**](#)

[**README**](#)

System Configuration:

For better performance, you may choose to shut down applications other than MacCIM when using the WorldsAway software

INFORMATION CENTER

README

MINIMUM SYSTEM CONFIGURATION:

CPU:	Quadra Family, Power PC Family, or Performa 575 and better
Operating System:	System 7.1
RAM:	8 Megabytes*
Hard Drive:	30 MB during installation, 15 MB installed**
Display :	256 colors
Modem:	9600 baud Hayes compatible
CompuServe MacCIM:	v.2.4.2 or later

*If you are running WorldsAway on a Macintosh with less than 12M of real RAM we recommend that you turn on virtual memory in the Memory Control Panel. More detailed information can be found in the Library of the WorldsAway Forum, in Section #2: "WorldsAway Software."

**30 MB of Hard Drive space is required to download the WorldsAway Installer and install the WorldsAway Software. After the WorldsAway Software has been installed, the downloaded WorldsAway Installer can be deleted to free up 15 MB of Hard Drive space.

INSTALLATION FROM CD-ROM:

1. Double-click on the ClickMe icon.
2. Follow the onscreen prompts to complete the installation
