Welcome to Gryphon Bricks™ 1.0 Demonstration Version!

Gryphon Bricks 1.0 is the first virtual construction toy for kids 5-105! Ever wanted to create your own space station, sky scraper or concept car? If you can imagine it, you can create it with Gryphon Bricks. Gryphon Bricks includes both a kids (ages 5-10) and adult (we call them "older kids") interface. The "Kids" version features easy-to-click buttons, fun sounds associated with each function, and several backgrounds to choose from to put behind creations. The "Older Kids" interface has all the features offered in the "Kids" interface, but includes more sophisticated functions, like multi-view options and the ability to print out blueprints of creations to build real world models.

This is an almost completely functional version of Gryphon Bricks 1.0 for Windows but is limited to only 5 different types of bricks, cannot save or print documents, and allows only 50 bricks to be placed in a document. The full 1.0 version also provides the following:

• Over 300 different types of bricks
• 86 sample documents
• Full Visual Basic support
• 13 compiled Visual Basic scripts accessable from within the program (providing animation and utilities)
• Background images
• Drag-and-Drop support
• Printing of a document, a parts list, or building instructions
• On-line help
• 16-bit and 32-bit versions are included

To use this demo, you will need Windows 3.1, 95, or NT, and about 4 megabytes of RAM.

Have fun!
