

The Words - ReadMe

Read this before running the program.

What is The Words?

The Words is an easy to use vocabulary learning program which you can use when you learn a foreign language.

You write your own words with the program, save them as wordlists and then you learn them. The Words is a freeware program.

Required files

Before you run this program, you must have the **VB 4.0 32-bit runtime files** installed in your Windows system directory.

You can download the files from:

<http://www.apexsc.com/vb/ftp/vbtt/vb4r32p.exe>

Just run the file after you have downloaded it and it installs the runtime files for you.

If you have problems when you install this program try to download the above file, it contains all required files for this program. There are also other files available with the runtime files but they do not contain all required files.

Other notes

This is a 32-bit version and it works with Windows 95 and better. There is also a 16-bit version of The Words. You can download both versions from The Words Homepage.

Before you go to The Words Homepage from the program, make sure that your web-browser is not running! Otherwise the function will not work.
