

Keyboard Shortcuts

Most of the buttons can be operated by typing their label characters without using command keys.

To enter a negative number use the minus key that is on the main part of the keyboard. To activate the add or subtract buttons use the numeric keypad. Floating point numbers with exponents must be entered as 1.2E+3 or 1.2E-3. Extreme exponential values sometimes don't parse.

The left and right arrow keys shift the value left (<<) and right (>>).

The up and down arrow keys increment (++) or decrement (--) the bits of the value.

The page up and page down keys roll the stack up or down.
