

The Junior Science Series #5 Light

Light is a form of energy that travels in waves. It is the only form of energy that can travel through a vacuum.

Light is made up of particles called photons. These particles travel in straight lines and can be reflected or refracted.

Light is the only form of energy that can travel through a vacuum. It is the only form of energy that can travel through a vacuum.

Light is made up of particles called photons. These particles travel in straight lines and can be reflected or refracted.
