

YEAR 1.1

Copyright © 1992 Software Professional.

YEAR is a Windows' calendar application that allows you to see the entire year at a glance. You can view any Gregorian calendar year from the range 1 to 32767 A.D. A number of formatting options, including display colors and fonts, can be selected.

YEAR will also allow you to print hard copies of the year-at-a-glance calendars in your favorite selection of printer fonts and formats.

YEAR has a "Day-Info" and "Time-Span" features, that allow you to obtain useful information about a particular day in a year, and calculate the time-span between any two given dates, respectively. Simply point and click with the mouse.

For more information, refer to the on-line documentation (YEAR.HLP) provided with this package.

Files in the package:

YEAR.EXE	-	Program file.
YEAR.HLP	-	On-line help (documentation).
YEAR.YER	-	Sample configuration file.
YEAR.WRI	-	This file.

NOTE: YEAR is a commercial application. For Software License and Disclaimer and information on how to register, see on-line documentation (YEAR.HLP).
