

BitDefender ANTIVIRUS v10

www.bitdefender.com

Antivirus • Antispyware

Safeguard your valuable data

BitDefender Antivirus v10 delivers a one-two security punch, integrating today's most powerful antivirus and antispyware modules into one convenient package. It's easy to use and updates itself automatically, making it truly an 'install and forget' solution.

Antivirus

Our antivirus module ensures detection and removal of **all** viruses in the wild. BitDefender Antivirus utilizes robust scan engines certified by ICSA Labs, Virus Bulletin, Checkmark, CheckVir and TÜV.

IMPROVED Proactive Detection

B-HAVE (Behavioral Heuristic Analyzer in Virtual Environments) acts like a virtual "computer-inside-a-computer," running pieces of software in order to check for suspicious behavior. This BitDefender proprietary technology represents a new security layer that keeps your operating system safe from unknown viruses by detecting malicious bits of code before their signatures have even been released!

Permanent Antivirus Protection

 The new and improved BitDefender scanning engines will scan and disinfect infected files on access, minimizing data loss. Infected documents can now be recovered instead of being deleted.

NEW Web Scanning

Web traffic is now filtered in real-time even before reaching your browser, providing a safe and enjoyable web experience.

Peer-2-Peer and IM Applications Protection

Filters against viruses that spread via instant messaging and file sharing software applications.

Full E-mail Protection

BitDefender runs on the POP3/SMTP protocol level. It filters incoming and outgoing e-mail messages regardless of the e-mail client used (Outlook™, Outlook Express™, The Bat!™, Netscape®, etc.), and it requires no additional configuration.

Antispyware

BitDefender monitors and prevents potential spyware threats in real-time, before they can damage your system. By making use of a comprehensive database of spyware signatures, BitDefender keeps your computer spyware-free.

Real-Time Antispyware

BitDefender monitors dozens of potential “hotspots”—places on your computer where spyware typically resides, and also checks any changes made to your system and software. Known spyware threats are also blocked in real-time.

Spyware Scanning and Cleaning

BitDefender can scan your entire system, or just part of it, for known spyware threats. Our scan uses a constantly updated spyware signature database.

NEW Privacy Protection

The privacy guard monitors both web and e-mail traffic flowing out of your computer to identify personal information such as credit card numbers, Social Security numbers and other information such as parts of passwords.

Anti-Dialer

A configurable anti-dialer prevents malicious applications from running up a huge telephone bill at your expense.

Cookie Control

The firewall filters incoming and outgoing cookie type files, keeping your identity and preferences confidential when you're browsing the Internet.

Active Content Control

Proactively blocks any potentially malicious application such as: ActiveX, Java Applets or Java Scripts type codes.

Other Features

ENHANCED User Experience

BitDefender has redesigned the user experience, placing emphasis on ease of use and the avoidance of clutter. As a result, many BitDefender v10 modules require significantly less user interaction, through the convenient use of automation and by enabling the software to learn as it detects both actual and potential threats.

Hassle-Free Hourly Updates

Your copy of BitDefender automatically updates itself once every hour over the Internet, directly or through a Proxy Server, making it truly an “install and forget” solution. Your product is able to repair itself, if necessary, by downloading the damaged or missing files from the BitDefender servers.

24/7 Support

Comprehensive protection meets comprehensive support! Qualified representatives provide BitDefender customers with free support online, via telephone or by e-mail. We've got you covered - all day, every day.

Rescue CD

Your BitDefender Antivirus v10 is on a bootable CD. You can use this CD to analyze/repair/disinfect a compromised system if you can't start it.

System Requirements:

Pentium II 350 MHz or higher processor
Minimum 128 MB of RAM Memory (256 MB recommended)
Minimum 60 MB available hard disk space

Operating Environment:

Windows 2000/XP IE 5.5 (+)
