Antivirus • Application Firewall • Antispam • Antispyware

Powerful protection with worry-free operation

BitDefender Antivirus Plus v10 integrates today's most powerful antivirus, antispyware, firewall and antispam modules into one fully loaded security package. The result is a comprehensive solution that meets the needs of today's most demanding computer users.

Antivirus

Our antivirus module ensures detection and removal of **all** viruses in the wild. BitDefender Antivirus Plus uses robust scan engines certified by ICSA Labs, Virus Bulletin, Checkmark, CheckVir and TÜV.

IMPROVED Proactive Detection

B-HAVE (Behavioral Heuristic Analyzer in Virtual Environments) acts like a virtual "computer-inside-a-computer," running pieces of software in order to check for suspicious behavior. This BitDefender proprietary technology represents a new security layer that keeps your operating system safe from unknown viruses by detecting malicious bits of code before their signatures have even been released!

NEW Web Scanning

Web traffic is now filtered in real-time even before reaching your browser, providing a safe and enjoyable web experience.

Peer-2-Peer and IM Applications Protection

Filters against viruses that spread via instant messaging and file sharing software applications.

Full E-mail Protection

BitDefender runs on the POP3/SMTP protocol level. It filters incoming and outgoing e-mail messages regardless of the e-mail client used (Outlook™, Outlook Express™, The Bat!™, Netscape®, etc.), and it requires no additional configuration.

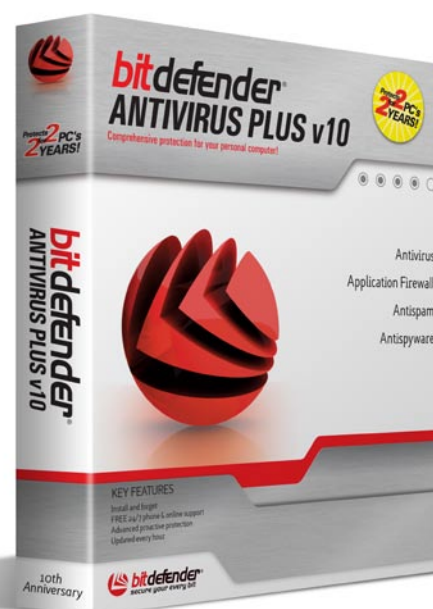

Application Firewall

The firewall module filters network traffic and controls the access permission of applications connecting to the Internet.

Internet Traffic Control

Defines exactly which incoming or outgoing connections to permit/deny. Defines rules regarding specific protocols, ports, applications and/or remote addresses.

IMPROVED Internet Application Control

BitDefender maintains a database of trusted applications, and informs users whether or not the applications demanding network access are trustworthy. BitDefender can also grant access automatically for trusted applications.

Antispam

The *new and improved* BitDefender Antispam technology employs remarkable technological innovations which allow it to adapt to new spamming techniques as they emerge, and to “learn” its user’s preferences to block spam while maintaining a very low ratio of legitimate mails tagged as spam.

IMPROVED Adaptive Filtering

BitDefender employs advanced clustering and neural network analysis techniques to classify e-mail based on user preference and emerging patterns in the local collection of e-mails.

Anti-Phishing

BitDefender’s new phishing detector keeps your computer clear of malicious e-mails trying to trick you into giving away your bank account information or other sensitive data.

Antispyware

BitDefender monitors and prevents potential spyware threats in real-time, before they can damage your system. By making use of a comprehensive database of spyware signatures, BitDefender keeps your computer spyware-free.

Real-Time Antispyware

BitDefender monitors dozens of potential “hotspots”—places on your computer where spyware typically resides, and also checks any changes made to your system and software. Known spyware threats are also blocked in real-time.

NEW Privacy Protection

The privacy guard monitors both web and e-mail traffic flowing out of your computer to identify personal information such as credit card numbers, Social Security numbers and other information such as parts of passwords.

Other Features

Hassle-Free Hourly Updates

Your copy of BitDefender automatically updates itself once every hour over the Internet, directly or through a Proxy Server, making it truly an “install and forget” solution. Your product is able to repair itself, if necessary, by downloading the damaged or missing files from the BitDefender servers.

24/7 Support

Comprehensive protection meets comprehensive support! Qualified representatives provide BitDefender customers with free support online, via telephone or by e-mail. We’ve got you covered - all day, every day.

Rescue CD

Your BitDefender Antivirus Plus v10 is on a bootable CD. You can use this CD to analyze/repair/disinfect a compromised system if you can’t start it.

System Requirements:

Pentium II 350 MHz or higher processor
Minimum 128 MB of RAM Memory (256 MB recommended)
Minimum 60 MB available hard disk space

Operating Environment:

Windows 98/NT-SP6/Me/2000/XP IE 5.5 (+)
