
Installing Acrobat Reader Contained on the PagePlus 8.0 Program CD-ROM

The PagePlus 8.0 Program CD-ROM contains the PagePlus 8.0 Companion in PDF format. To view the companion you must first install the Acrobat Reader by clicking the Install Adobe Acrobat Reader link in the Program Files\Serif Applications\PagePlus 8.0 folder of your Start menu. You can also run the Install file manually from the PagePlus 8 CD-ROM; it is located in the ACRO405 folder and to start the install simply run A405SETUP.EXE, or type Run... #: \ACRO405\A405SETUP.EXE from the Start menu (where # is the letter of your CD drive containing the PagePlus 8.0 Program CD-ROM).

Once the Acrobat Reader has been installed you will be able to view the Companion by clicking on the icon for "PagePlus 8 Companion" in the Program Files\Serif Applications\PagePlus 8.0 folder of your Start menu.

Migrating Your Portfolio From PagePlus 7 to PagePlus 8

This is possible when PagePlus 7 remains installed for a time after PagePlus 8, or if the PagePlus 7 Portfolio files have been backed up for future use. In PagePlus 7 itself, check the name of the Portfolio category that contains the objects you would like to migrate to PagePlus 8. In PagePlus 8, create a category of the same name in your Portfolio tab of the Studio. Then copy the associated .PPP file from the PagePlus 7 Portfolio folder (normally Program Files\Serif\PP70\Portfolio) to the PagePlus 8 Portfolio folder (normally Program Files\Serif\PP80\Portfolio) using Windows Explorer. When you next launch PagePlus 8, your Portfolio should have migrated.

Installing Fonts Contained on the PagePlus 8.0 Program CD-ROM

The PagePlus 8.0 Program CD-ROM contains over 400 TrueType fonts. To use font(s) you must first install them using the Control Panel\Fonts option from the Windows Start menu. The files for the fonts are located in the SERIF\FONTS folder of the PagePlus 8.0 Program CD-ROM.
