

Jaws PDF Creator™ Plugins ConfigRecorder

Purpose

The **ConfigRecorder** plugin adds an annotation to the first page of any PDF file made with Jaws PDF Creator listing the settings used to create the file.

Compatibility

The plugin is compatible with versions 3.0 and 3.1 of Jaws PDF Creator.

If used with earlier or later versions of Jaws PDF Creator the configuration report may be inaccurate or incomplete.

Installation

Open the *Jaws PDF Creator* folder, and copy the file *ConfigRecorder.jcp* from the *plugins (inactive)* sub-folder into the *Default* sub-folder.

Jaws PDF Creator v3.0: This plugin requires the amended version of *prologue.ps* to be installed. If supplied as part of the package with the plugin it should be copied into the *Default* sub-folder in the *Jaws PDF Creator* folder, replacing the existing file by the same name.

DO NOT perform this step for Jaws PDF Creator version 3.1 or later.

Advanced users of Jaws PDF Creator version 3.0 who have amended the *prologue.ps* file should be sure to take a back up of their previous version and to merge their changes into the new file.

WINDOWS: If you didn't select your own specific location when installing Jaws PDF Creator, you'll find the *Jaws PDF Creator* folder inside *C:\Program Files\JawsSystems*.

MACINTOSH: If you didn't select your own specific location when installing Jaws PDF Creator, you'll find the *Jaws PDF Creator* folder in *Applications* on the computer's primary hard disk.

Version 1.1.0, 28 Feb, 2003
