Jaws PDF Creator™ Plugins
TrappingOn & TrappingOff

Purpose

By default Jaws PDF Creator will make PDF files that do not indicate whether or not they have been trapped, ready for high-quality printing. These two plugins allow them to be explicitly labeled as having been trapped or not. *TrappingOn.jcp* will mark files as trapped, *TrappingOff.jcp* will mark files as untrapped.

Note that these plugins do not either trap the job, or remove existing traps, they simply allow the existing state to be recorded.

Compatibility

The plugin is compatible with version 3.0 and later of Jaws PDF Creator.

Installation

Open the *Jaws PDF Creator* folder, and copy either *TrappingOn.jcp* or *TrappingOff.jcp* from the *plugins (inactive)* sub-folder into the *Default* sub-folder.

> Jaws PDF Creator v3.0: This plugin requires the amended version of *prologue.ps* to be installed. If supplied as part of the package with the plugin it should be copied into the *Default* sub-folder in the *Jaws PDF Creator* folder, replacing the existing file by the same name.
>
> DO NOT perform this step for Jaws PDF Creator version 3.1 or later.
>
> Advanced users of Jaws PDF Creator version 3.0 who have amended the *prologue.ps* file should be sure to take a back up of their previous version and to merge their changes into the new file.

> WINDOWS: If you didn't select your own specific location when installing Jaws PDF Creator, you'll find the *Jaws PDF Creator* folder inside *C:\Program Files\JawsSystems*.

> MACINTOSH: If you didn't select your own specific location when installing Jaws PDF Creator, you'll find the *Jaws PDF Creator* folder in *Applications* on the computer's primary hard disk.

Usage

Once installed the plugin will activate when required – no user intervention is required.

If both of these plugins are installed, PDF files will be marked as having been trapped.

If you wish to control the trapping flag on a document by document basis you can use the *TrappedOn.eps* or *TrappedOff.eps* EPS assistant files – see *Goodies.PDF* for more detail.

Version 1.0.0, 2 May, 2003.
