Canvas™ 8

PROFESSIONAL EDITION

January 28, 2003

Welcome to Canvas 8. This document provides installation instructions and notes about this Canvas release. For information on using Canvas, refer to the Help system by pressing the F1 key or by choosing Help > Contents. For all the information you need to get the most out of Canvas, refer to the Canvas documentation:

- The **Getting Started Guide** provides tutorial lessons on many Canvas features, including customizing the interface and using the transparency effects.
- The **Canvas User's Guide** documents how to do everything in Canvas, including drawing, text editing, page layout, painting, image editing, presentations and web page design.

If you need additional help, refer to the end of this document for information about contacting Deneba Software.

INSTALLING Canvas 8

Before you install Canvas, please verify that your system meets the minimum requirements for running Canvas:

- Pentium™ II -class processor
- Microsoft® Windows 98 / ME / 2000/ XP or Windows NT 4.0 or later
- 64 MB RAM
- 80 MB free hard disk space
- 16-bit color or higher
- 800 x 600 or higher screen resolution

To install from CD-ROM

- To begin installation, double-click the file SETUP.EXE on the Canvas installation CD-ROM. On many systems, the Setup program will run automatically when you insert the Canvas CD-ROM. The Canvas Setup program displays instructions and options for you to select.
- On the Software License Agreement screen, read the license agreement and indicate your acceptance of the license agreement by choosing I accept the terms.
- You can choose to install Canvas with its complete feature set by choosing Complete; or, if you only want to install certain components or install Canvas in another directory, select Custom.

Entering your serial number

- During installation, the Setup program asks you to enter your name, company name, and the serial number for your Canvas version.
- In the Serial text box, type the serial number exactly as it appears on your Canvas Official Ownership Certificate. The serial number appears under the title and on the mail-in registration card.

Choosing a default color space

The Setup program asks you to choose color presets based on your typical work. You can choose RGB or CMYK color presets. The installation screen explains the typical uses for these types of colors. The color system you choose determines which default inks Canvas loads into the Inks palette. It also affects colors in the Strokes palette, the mode of the Color Dropper tool, and the default printer calibration setting. However, this choice does not limit your ability to use any color system that Canvas supports. You can choose either color option during installation, and later change color system settings in Canvas.

Remember to REGISTER!

Be sure to register your copy of Canvas! You can mail the registration card to Deneba or visit the Deneba web site (www.deneba.com) to register. Registration is important because you must be registered to receive free technical support. As a registered user, you can also receive special discounts on upgrades and other offers.

RELEASE NOTES

This section describes new features, changes, and corrections since the printing of the Canvas 8 documentation.

MetaObject container

When pasting into Canvas 8 from other applications, a MetaObject container is created. The MetaObject is a Canvas “Container” for a system metafile (WMF/EMF). It will draw, print, and act like a normal Canvas object using the system to render it. This should preserve the fidelity of the metafile. Previously, the metafile was converted to simple Canvas objects; however, in the conversion, errors may have occurred in scaling, positioning, and overall look. The MetaObject container method eliminates these problems. OLE and pasting as metafile will automatically create a MetaObject. To convert the MetaObject to a Canvas object, use Convert To Paths.

Save As... SVG

Canvas now exports files to Scalable Vector Graphics (SVG) format.

Slide Show palette

A checkbox has been added to the Slide Show palette. You can now define the beginning slide for presentations by choosing the slide and then selecting the Start from Selected Slide checkbox.

Sequences & Scripting

The following table indicates the various functions available for sequences and/or scripting:

Available for Sequences	Available for Scripting
Specific object sequences	
Create Bézier	x
Create Polygon	x
Smooth Polygon	
Unsmooth Polygon	
Create Line	x
Set Line Length	
Set Line Angle	
Create Rectangle	x
Create Oval	x
Create Rounded Rectangle	x
Modify Rounded Rectangle	x
Create Arc	x
Modify Arc	x
Create Concentric Circles	x
Modify Concentric Circles	
Create Multigon	x
Modify Multigon	
Create Spiral	x
Modify Spiral	
Create Cube	x
Create Grid Object	x
Modify Grid Object	
Create Dimensions Object	
Modify Dimensions Object	
Create Easy Shape	
Create Slice	
Object operation sequences	
Select Object	x
Deselect Object	x
Select All	x
Deselect All	x
Delete Object	x

Move Object	x
Scale Object	x
Rotate Object	x
Move Object Rotation Center	
Flip Object	x
Lock Object	x
Unlock Object	x
Group Objects	x
Ungroup Object	x
Set Object Printability	x
Duplicate Object	x
Replicate Object	x
Bring Object To Front	x
Send Object To Back	x
Shuffle Object Up	x
Shuffle Object Down	x
Align Object	
Set Object Data (Object Spec)	
Set Object Color Separation (Object Spec)	
Set Object Ink	x
Set Object Stroke	x
Set Object Dash	x
Set Object Arrow Stroke	
Clear Object Arrow Stroke	
Make Composite Object	x
Break Composite Object	x
Make Clipping Path	
Release Clipping Path	
Show Or Hide Clipping Paths	
Remove Object Effects	x
Join Path Objects	
Convert Object To Paths	x
Fit Bézier	x
Reduce Object Points	x
Add Polygon/Bézier Points	x
Convert Object To Simple Paths	
Colorize Object	
Combine Objects	x
Dynamic Blend Objects	
Envelope Object	x
Extrude Object	x
Set Extrude Light	
Rotate Extrude Object
