

This tool can be used to remove Symantec applications if you are having problems installing an application that has detected leftover files/registry keys from a previous version. This tool will help with uninstalling or cleaning up the previous application.

To uninstall the previous application, click on the Add/Remove button below.

If you are having problems uninstalling the previous version of a product using Add/Remove, or you do not see your application listed in the Add/Remove control panel, click on the Continue button below to continue with an automated manual removal.
