RadioLover Release Notes
support@radiolover.com
www.radiolover.com

Upgrading to v1.3 is FREE for all users.   Existing registration details, streams, and schedules are kept safe.

Note: If you are currently using versions 1.1 thru 1.16x, and you upgrade, you will no longer be able to run the older versions 1.1 thru 1.16x.   If you really need to use these older versions, delete the file "HOME/Library/Preferences/org.bitcartel.radiolover.plist", and enter your registration details again.

How To Upgrade

1. Remove the old version of the application by moving it to the Trash.
2. Install the new version by dragging the application icon to your hard disk.

System Requirements

- Mac OS X 10.2 or later
- iTunes 4

What's New

1.3 build 69 (23 Mar 2005)
- Fixed bug where if the new option to set a playlist name based on the scheduled recording name was enabled, normal recordings would only be added to the default RadioLover playlist, and not the user's chosen playlist.
- Fixed bug where if splitting later than normal, and no track numbers are to be added to recordings, a bad track number was still set (usually seen in iTunes as 65535).
- Fixed issue of missing ID3 tags in certain situations

1.3 build 68 (19 Mar 2005)
- Scheduler interface updated
   - Schedules can be named, and the name used as the playlist name when adding scheduled recordings to iTunes
   - New widget to enter start and date times
- Improved main window table interface
   - Highlighting and colouring emulates the iTunes table interface
   - Fixed an issue where row selections were not kept when sorting on columns
- Improved Preferences
   - Preferences window now uses tab views to organise options
   - Preferences window can be closed by pressing the Esc key, Command-W or

Command-period.
   - Fixed a bug where if the preferences file was deleted or corrupted, radio stream data would be lost
   - Fixed bug where first time users could have an invalid download path
   - Fixed some issues with upgrading from very old versions of RadioLover
- Fixed bugs in ID3v2 tag generation
- Updated Libcurl to 7.13.1 (security fix for curl)
- Many internal fixes

1.3 build 67 (16 Feb 2005)
- Added support for protected streams using HTTP basic authentication
- Added ability to handle malformed content-types
- Recordings with ID3v2 tags now have the genre set to 'RadioLover' making it easy for users to set up a smart playlist in iTunes to find recordings made with RadioLover.
- Increased maximum split adjustment factor from 30 to 60 seconds earlier or later
- Updated libcurl to 7.13.0
- Resolved an issue where if auto-splitting, but the broadcaster does not send new stream titles, one big file will be saved as expected, but it is left in the incomplete folder and thus not added to iTunes playlists.
- Fixed bug where scheduler calendar would not update to current day, or year, unless the application was restarted.   Now it refreshes whenever the scheduler drawer opens.
- Fixed bug where a schedule could contain invalid start and stop times
