

XP SysPad V4.0.2 by XToRT©

Makes WindowsXP System Utilities One Click Away!

XP SysPad provides easy access to all of the prime Windows system info and utilities, such as the individual control panel applets.

What's New?

Version 4?

Version 4 is a re-write of the program. It includes a better component for the control panel, which now generates the control panel from a button. An analog clock is present now beside the calc edit. The Internet Explorer favorites menu is now with the user menus, located on a button called "My Menus". This menu is accessible at all times with a right-click on the system tray icon. Speaking of which, the application's icon has also been changed to a more noticeable one, as have some of the other menu icons. They are all max 256 color as well

What's changed?

1. The ability to display the CPU output on the form's caption bar greatly affected performance, so I felt that the trade-off was not worth it, so it is gone until a better routine is available.
2. For some reason, the Windows Office shortcuts do not respond to menu handlers. This is a mystery to me, and a "bug" that I will get to the bottom of asap.
3. The original "menu" style is here to stay. No more outlook bar digressions, I promise.

About

XP SysPad is a launcher which makes access to Windows system utilities its specialty. All of the prime Windows system info and utilities such as the individual control panel applets, can be launched with the click of one button, which makes it easier than hunting around the explorer pane or waiting for menus to fold out. For convenience, it also can minimize itself to the system tray. It launches over 100 functions in all!

The program is very small with a minute memory footprint, and makes no changes to your system registry whatsoever and comes with uninstaller. So, if for any reason you are unhappy with this program, just run the uninstaller. Hope you find it useful!

SYSTEM REQUIREMENTS

Windows 2000+
64 MB RAM
386 +
Mouse
320 Kb space
Installer:650 Kb

Standard Features :

Launch:

Internet Explorer
Ip Number
Google
Yahoo
Dmoz
