## PRODUCT DESCRIPTION

No matter how good the intentions, inevitably when disaster strikes a user has NO real up to date backup of the files that were lost.

The **mini-Backup Master** (v1.0) was initially created to answer the problem of LAN users NOT backing up their database files. The **mini-Backup Master** resided on a computer on the LAN with READ rights to All of the Directories where the Files needing to be Backed up were kept. The computer would be left on and once a day the **mini-Backup Master** would backup all of the Selected Files and Directory Masks. A Full Week of Backups was Kept On Hand. Therefore, a user could restore from a backup from any point in the last week.

In v2.0 for Windows 95/NT, the mini-Backup Master has become a backup dynamo. Fully Compressed Backups or Straight Backup Copies of Files and Directory Masks are housed in Seven Sub-directories (\SUNDAY, \MONDAY, \TUESDAY, \WEDNESDAY, \THURSDAY, \FRIDAY, \SATURDAY). Depending on the Day of Backup, the Backup files are stored in these sub-directories. Compressed Backups are stored in the Familiar ZIP Format. Restores from any one of the Seven Archives is a Click Away. The **mini-Backup Master** does not have to reside on an Administrator's Machine, any user that wants to backup his/her files can benefit from this application. Moreover, the **mini-Backup Master** does not have to run continuously, backups can be run on the Selected Files and Directory Masks at the Click of a Button.

Version 3.0, made only slightly different functional changes. The application was redesigned "under the covers" to become much more efficient.

Will Calculate the Amount of Free Space (in KB) on the Drive that the mini-Backup Master is Running.

Will Calculate the Amount of Disk Space (in Bytes & KB) that All of the Archives are Occupying.

Will Add the Selected File to the Backup.

Will Add a Directory Mask to the Backup. (i.e. \*.\* or \*.ext)

Will Remove the Selected File or Directory Mask from the Backup.

Will Remove ALL Files & Directory Masks from the Backup.

Will Automatically Backup the Selected Backup Files and Directory Masks Once A Day (Within One Minute of the Application Starting, the Auto Backups will commence and will run just after Midnight thereafter, unless Auto Backups is Disabled).

If this is Selected, then all Backup Files and Directory Masks will be Backed Up into one Compressed ZIP File. If NOT, a straight copy of all files will occur. (the Default at Application Start is Compression ON)

Will Run the Backups Immediately.

The Log Contains All of the Success and Error Messages that Occur During Any Operation Performed with the Application. Within the Log, You have the Ability to Clear the Log, Copy Log Information and Mail Log Information.

Will Cause the Application to Run Quietly in the Background. The Small Icon Will Always Appear in the Task Bar or System Tray.

Will Completely Shutdown the Application.

Will Restore the Selected File or Directory Mask (in the Backup List) From the Selected Day Archive.

Will Restore All Files & Directory Masks (in the Backup List) From the Selected Day Archive.
