

MacLink Plus/Bridge 1.0

In order to provide our customers with additional file translators, the MacWrite® II, version 1.1 application is now compatible with the **MacLink Plus/ Translators**, available from DataViz, Inc. Used in conjunction with the **MacLink Plus/Bridge** (included with MacWrite II, version 1.1), you can access the following file translators:

- WordPerfect 4.2 PC
- WordPerfect 5.0 PC
- WordStar
- XyWRITE III
- WPS-Plus VMS
- MultiMate
- Officewriter
- Print Capture
- DCA-RFT (included)

The **MacLink Plus/Bridge** contains a DCA-RFT translator. MacWrite II will automatically install this file when the **MacLink Plus/Bridge** is placed inside the **Claris Translators** folder, located in one of the following three places (the same installation procedure used for all Claris™ Translators):

- 1) The System Folder.
- 2) A "Claris" folder inside the System Folder.
- 3) The MacWrite II application folder.

File translators other than DCA-RFT are available through the **MacLink Plus/Translators**, purchased separately. For further information, please contact:

DataViz, Inc.
