

## Why should I get updates for installation?

The latest updates will help ensure a successful installation and can help protect your computer against security threats.

Updates include:

- Installation updates: important updates for installation files to help ensure a successful installation.
- Driver updates: updated or additional hardware drivers to help ensure that Windows will work with your computer hardware.
- Windows updates: the latest important updates for the version of Windows that you are installing.
- Microsoft Windows Malicious Software Removal Tool updates: updates for the latest version of this tool, which can help remove malicious software such as viruses and worms if it detects them on your computer.
