

MODEM SHARE™

Connect to any
PC or network

Windows® 95
support

One phone line,
one modem
for everyone in
the office.

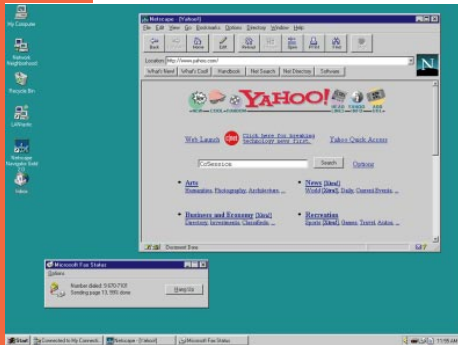

Online services and the Internet have become vital business tools. For many businesses, making these resources available throughout the company has been cost-prohibitive, since it meant dedicating a phone line and modem for each user. Now, Artisoft offers an easy, affordable solution with INSYNC® ModemShare.™

ModemShare enables businesses with mixed environments of Windows 95, Windows and DOS PCs to share phone lines

and modems across a local area network. Instead of buying a modem and dedicating a phone line for each user, everyone on the network can use their favorite communications software and share modems and phone lines. This new and more powerful version of ModemShare (formerly Modem Assist Plus®) makes it easy to fax, access the Internet and more, without ever leaving your desk.

Share modems and phone lines with the click of a button.

ModemShare lets Windows 95 users access multiple communications services simultaneously, so there's no waiting for a session to finish.

Features

- Shares modems and phone lines in mixed Windows 95, Windows 3.x and DOS environments
- Works with your favorite Internet browser and other online access programs
- Uses your favorite Windows fax software so you can send faxes from any PC on the network
- Virtually transparent — users access shared modems as if they had a local modem
- Provides total interoperability between Windows 95, Windows 3.x and DOS PCs
- Works with the latest 32-bit communications applications
- In Windows 95, multiple modems can be used to access multiple communication services simultaneously — so you can browse the Internet while sending a fax
- Supports inbound third-party remote control applications such as INSYNC CoSession Remote™
- Redirects INT14 and NASI DOS communication packages to shared modems
- Connects to a COM port for direct access to a mainframe, printer or other serial port device
- Redirects COM ports to shared modems under Windows and Windows 95
- Enables businesses to use older DOS and Windows PCs as communications servers, rather than investing in expensive hardware and software
- Allows any Windows or Windows 95 PC on the network to access communication management functions previously available only at the modem server
- Allows global views of available communications resources and their status on the network
- Displays specific modem and phone line use
- Centrally logs all modem activity and displays this data by user name and node address
- Grants and denies shared access to modems on the fly in Windows 95

System Requirements

Network Operating Systems

Works with NetWare®, LANtastic® v6.0, LANtastic® Power Suite and LANtastic for Windows 95, IPX/SPX, NetBEUI and NetBIOS networks

Communication Server

IBM PC or compatible

640K RAM

Windows 95, Windows 3.x, or DOS 5.0 or later

Hayes®-compatible modem

Class II modem for faxing

16550 buffered UART device (needed to enable speeds over 9600 bps in Windows)

Dedicated 80386 processor or above to share five or more modems

Supports non-intelligent multi-port boards

Communication Client

IBM PC or compatible

640K RAM

Windows 95, Windows 3.x, or DOS 5.0 or above

Third-party communications packages, such as fax, Internet access and remote control programs (DOS applications must support INT14 or NASI)
