Log

The workbook could not be opened. Check to make sure the workbook file is valid

The Laroux virus found, but could not be removed (either the workbook structure is protected, or the workbook is shared).

The Laroux virus was found and removed, but the workbook could not be saved (either it is read-only, or a disk error occurred).

The workbook could not be opened because a file by the same name was open at the same time.

The workbook was password protected and/or reserved for Excel '95 users.

The workbook was not searched because the Laroux virus can only infect files that have changed since July 1996.

Microsoft Excel Virus Search Add-In Version 1.1

The workbook 'M_WORK2.XLS' that you are opening contains macros. Please be aware that some macros may contain viruses that could harm your computer.

If you are sure this workbook is from a trusted source, click 'Open with macros'.

If you click 'Open without macros', the workbook opens without any Visual Basic for Applications (VBA) or Excel Macro Language (XLM) macros or any viruses they may contain. If you then save this copy of the workbook, all macros will be lost.

If you want to inspect the macros manually without running them on open, select the check box under Advanced and then click 'Open with macros'. Please note that there are other ways for macros to execute.

Microsoft Excel Virus Search Add-In Version 1.1

protect_infect.xls has the Laroux virus.

The virus could not be removed. The workbook may be protected, or it may be a shared workbook.

To remove the virus, unprotect the workbook or remove it from shared use, and open the workbook with the Virus Search Add-in installed or run a Virus Scan on the file.

If you do not have the protection password or permission to make these changes to the workbook, contact the owner of the file.

OK

okg

Microsoft Excel Virus Search Add-In Version 1.1

This search will check each of your workbook files for the Laroux virus, remove the virus, and then save the cleaned files.

When you click OK, all workbook files you currently have open will be saved and closed. If you want to close the workbooks yourself without saving, click Cancel, and then use the Virus Search command on the Tools or File menu to restart this search.

Message

All open workbooks have been searched. The Laroux virus was not found in any of the workbooks.

Scan complete.

You should save over the original workbooks to ensure the virus is permanently removed.

Because the Laroux virus was discovered in July 1996, workbooks that have not been saved later than that date are unlikely to be infected with this virus. Do

Scan complete. No files were found that contained the Laroux virus.

Scan aborted. No files were found that contained the Laroux virus.

Do you want to scan more folders?

Do you really want to abort the virus scan?

Please close this file and then use the Virus Search command in the Tools menu to restart this search.

This Microsoft Excel Virus Search Add-In will not function in the Mac environment.

Microsoft Excel can detect and remove the Laroux virus in your workbook files. Do you want to search for this virus?

You cannot open more than one file at a time with the Virus Scan Add-in installed.

Could not remove all macros. The workbook may be protected or shared. This workbook will be closed.

This file is a text file that does not contain a virus. To open this file using the Text Import Wizard, click OK, and in the Open dialog box, click OK.

Because this Open dialog box does not provide virus protection, you can only open text files safely. Do not click a different file before you click OK.
