

# *SecureObjects*

Software security across the  
enterprise

Easily administered total control

# SecureObjects

A transparent mechanism to:

- Secure a corporation's software investment
- Enforce application license agreements
- Prevent software theft

# SecureObjects

Answers corporate needs:

- Ensures strong protection for custom intellectual property
- Protects off-the-shelf software without rewriting a line of code
- Applies version control
- Inoculates all secured objects against viruses

# Enterprise-wide Use

- Corporate Policy Management
- LAN Administrators
- Security Officers
- Database Administrators
- Controllers and Auditors
- Application Users

# Administration Client

Organizes multiple tasks through an intuitive GUI:

- Secures executable programs, DLLs, and/or OLE objects with RSA encryption technology
- Defines software licenses throughout the network
- Controls access by product, user, time, history of use, location, and workstation

# User Client

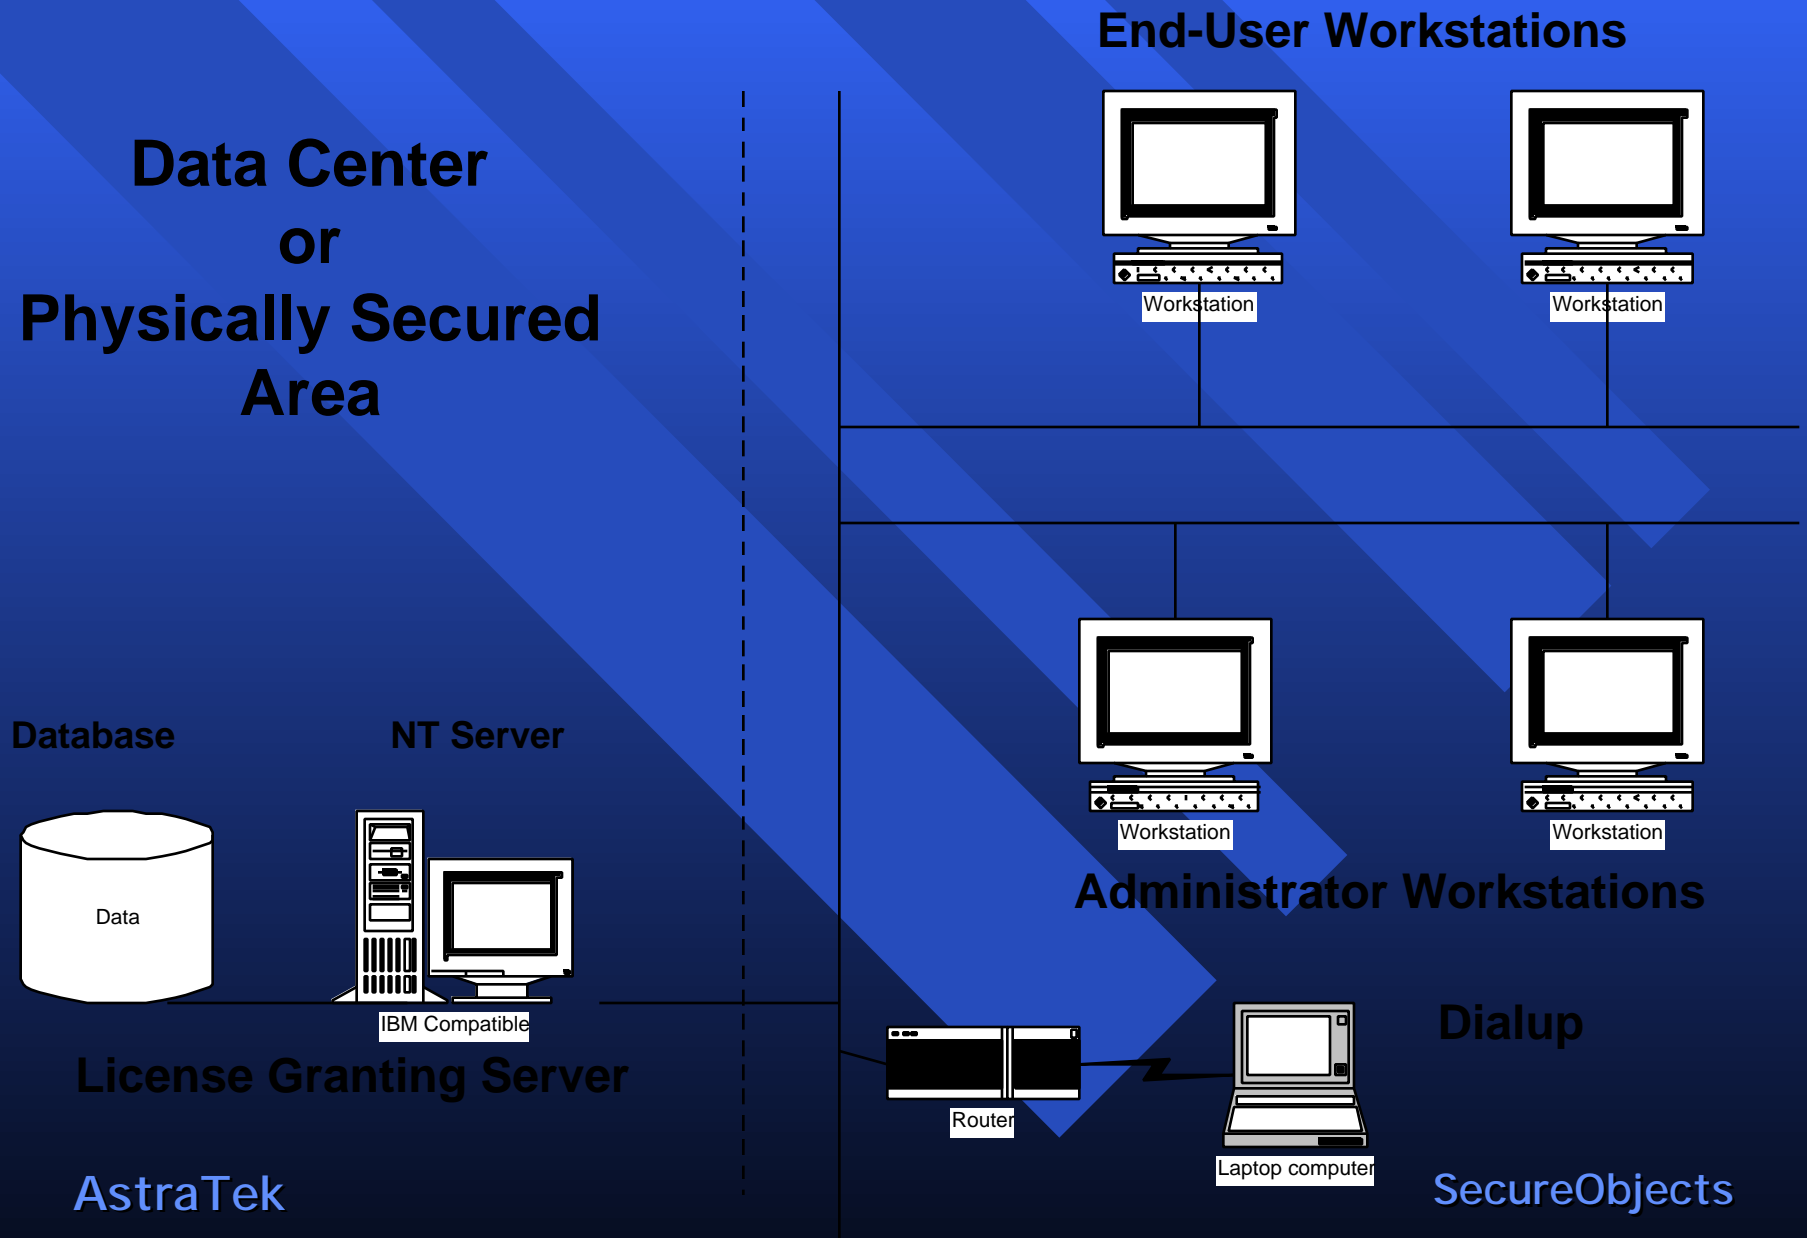

- When the user selects an application icon, the application is transparently decrypted and loaded into memory.
- Because RSA's RC5 encryption algorithm is optimized for software, decryption does not degrade performance.

# Benefits

Centralized robust access control:

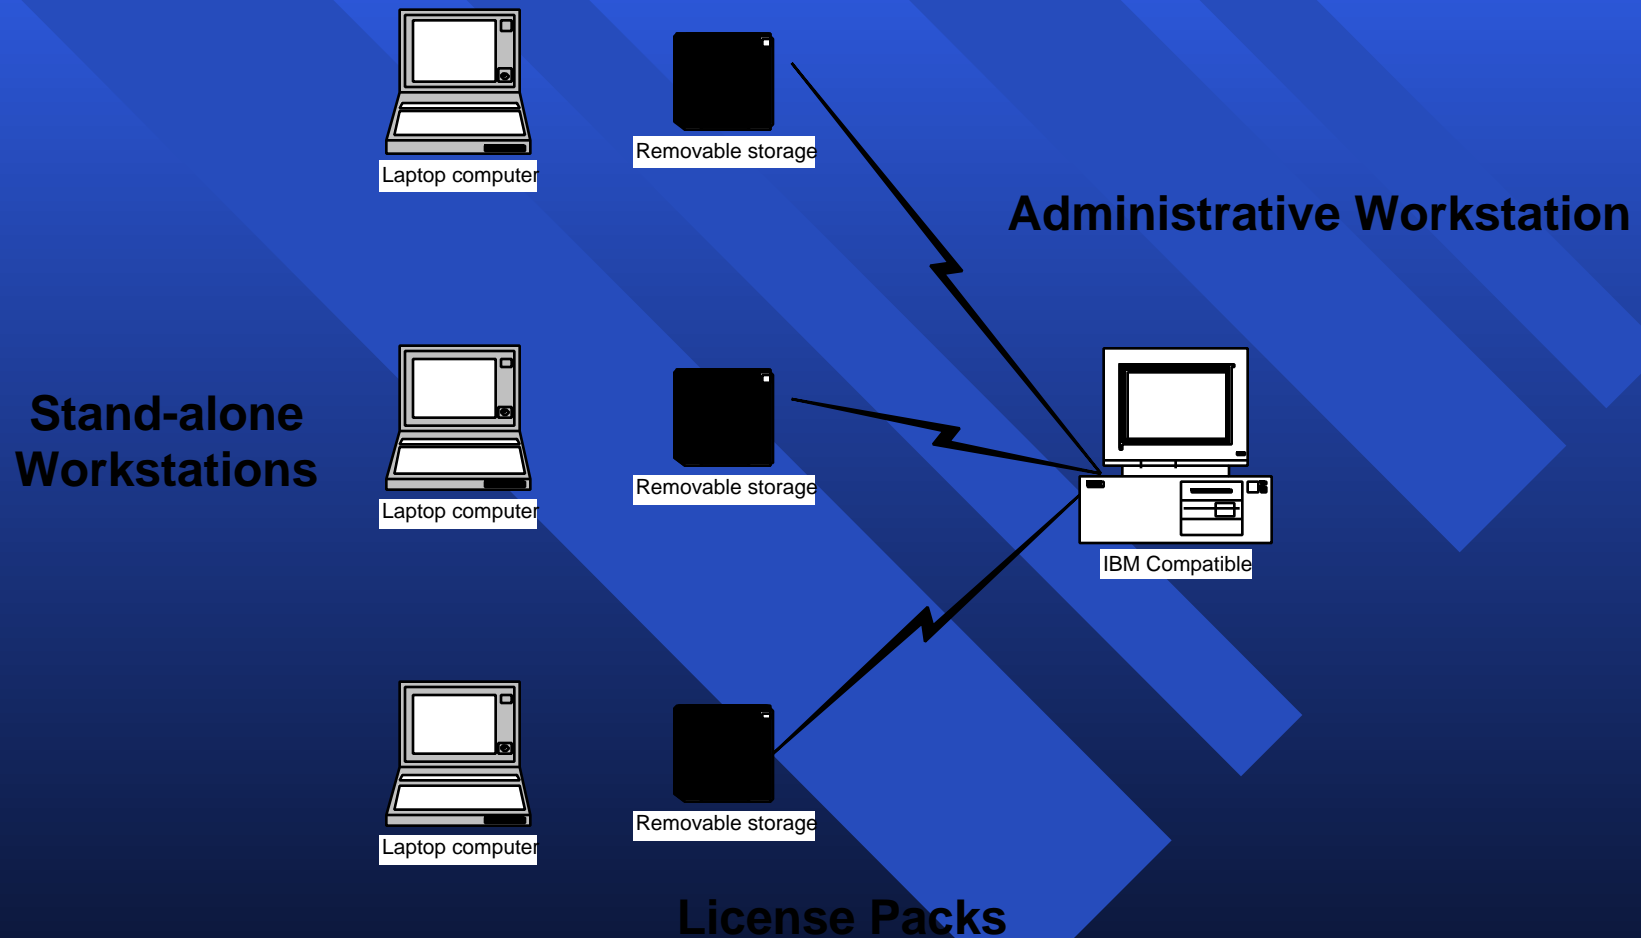

- Strong protection for custom intellectual property
- Non-invasive protection for off-the-shelf software
- Automatic version control
- Automatic virus inoculation
- Transparent operation

# SecureObjects LAN Connected Architecture

# SecureObjects Stand-alone Architecture

AstraTek

SecureObjects

# System Requirements

- **Administrator Client and User Client:**

Windows NT Workstation 3.51 or 4.0,  
Pentium, 5 MB free disk space, 24 MB  
RAM

- **Server:**

Windows NT Server 3.51 or 4.0 running  
Microsoft SQL Server 6.0 or 6.5

# Availability

- Customer shipments available early 2Q97

# Future Versions

Will include support for HTML pages.
