

THE 1997 RSA DATA SECURITY CONFERENCE

SPEAKER BIOGRAPHY

PRODUCT DEMO I

Track Performance Opportunities for Dedicated
Cryptographic Processors in SSL

Speaker: **Shawn Abbott**

Chief Scientist

Rainbow Technologies

50 Technology Way

Irvine, CA 92718

Phone: 403-246-2790 Fax: 403-246-0304

Email: sabbott@tcel.com

Company Background:

Rainbow Technologies is the world's leading developer, manufacturer and supplier of software protection technologies. Its Mykotronix division is the technology leader in custom cryptographic processor design, developer of the notorious Clipper chip and number one supplier of satellite communications encryption devices.

Presentation Overview:

SSL can consume over 90% of your server's processor. Research into high performance secure server capacity and the use of hardware acceleration is presented.

Speaker Background:

Chief Scientist at Rainbow Technologies, Shawn Abbott is expert in intellectual property protection and cryptographic systems. Mr. Abbott has created and taught software engineering courses and developed software since 1985. His former company, the AND group, pioneered CD-ROM locking, yielding several million disks.
