

# THE 1997 RSA DATA SECURITY CONFERENCE

## SPEAKER BIOGRAPHY

### GENERAL SESSION

Panel: Case Studies in Deployment of Public Key Infrastructures

Speaker: **Claude Perreault**,  
Notaire, Executive Vice President  
Notarius Inc.

1029, rue Bellevue Sud  
Greenfield, Quebec J4V 1J8

Phone: 514-926-0157;

Fax: 514-926-0703

Email: 74407.2402@compuserve.com

### Company Background:

Notarius (TSIN) Inc., the technology and information systems division of the Chambre des notaires du Quebec, was founded in 1996 to develop and market services and products for use by the notary profession in the private and public sectors, and provides comprehensive consulting, licensing and research services in the legal and new information technology sciences field.

### Presentation Overview:

As Nathan Myhrvold said, "Virtually everybody agrees that RSA is the way to go," . . . but that's only part of the story. Often, actually rolling out the RSA public key infrastructure is the hard part! Our panel offers several first-hand perspectives on implementing and using RSA-based systems on a large scale.

### Speaker Background:

Me Claude Perreault, Notary Public, has been working for the Chambre des notaires du Quebec for six years and is now the Executive Vice President of Notarius (TSIN) Inc. His extensive knowledge of the use of new information technologies has led to his focus on the legal issues raised by the use of cryptography to identify parties to an electronic transaction. Under his leadership, the civil law notaries of the province of Quebec are becoming high end certification and registration authorities, giving public faith to electronic transactions.
