

PRETTY GOOD PRIVACY™

Pretty Good Privacy, Inc. (www.pgp.com) is the world's leading provider of digital-privacy software for individuals and businesses. Founded in March 1996, Pretty Good Privacy is dedicated to providing transparent and trusted cryptography products that stem the erosion of privacy in the Information Age. Pretty Good Privacy currently sells PGP/mail, and is developing a full suite of products that provide privacy for many forms of digital communications and datastorage. Pretty Good Privacy's original encryption software for e-mail applications (PGP) was distributed as freeware in 1991 by Phil Zimmermann, Chairman and Chief Technology Officer of Pretty Good Privacy, and allowed individuals, for the first time, to send information without the risk of interception. With millions of users, it has since become the de facto standard for Internet mail encryption. Almost a third of all Fortune 100 companies are using the product.
