

Mytec Technologies, Inc., offers a biometric verification device based on optical computing technology capable of securing information over the Internet by use of Biometric Encryption™. This device uses the information contained in the finger pattern to encode a number such as a PIN or encryption key. The resulting number, which has been finger printed encrypted, is known as a Bioscript™. The coded number can only be released when the user's finger is scanned by a Mytec reader. Since the actual finger pattern is never stored, the user is assured of anonymous enrollment and privacy of their personal information. Applications of this technology include electronic commerce, Internet purchasing, telephone banking and credit debit card fraud elimination. Mytec Technologies, Inc. is a public company listed on the Toronto Stock Exchange under the trading symbol, MYT.
