

Finjan Software, Ltd. develops and markets Internet security solutions. Finjan's first suite of products provide enhanced security for Java™, a cross-platform programming language for the Internet, with Java applet checking and robust Java security management. Finjan's family of products detect and combat suspicious Java applets, secure the Java run-time environment and establish security policy in a user-friendly manner. Finjan's mission is to provide users security and confidence as the leading provider of Internet/Intranet security solutions.
