

Chrysalis-ITS specializes in embedded cryptographic products for workstation, network and Internet security. Chrysalis tokens protect the encryption and digital signature keys used to conduct electronic commerce or secure messaging. Chrysalis products increase user confidence and provide a greater degree of non-repudiation over electronic transactions because they provide a greater degree of security than software alone. Chrysalis designs and manufactures the Entrust/Token-PCMCIA for Nortel and the Government Electronic Services Card (GESC) for the Canadian Government. For further information on Chrysalis products, contact Blair Canavan at 613- 731-6788 or visit the Chrysalis web page at www.chrysalis-its.com.
