500 Airport Blvd., Suite 345

Burlingame, CA 94010

Phone: 415-579-6432

Fax: 415-579-3688

Company Background:

Terisa Systems, Inc., based in Los Altos, California, was formed in 1995 to provide unified communications security solutions for the World Wide Web. In early 1995, leading industry players such as America Online, CompuServe, IBM/Prodigy, Netscape, RSA and VeriFone/EIT forged a common commitment to World Wide Web security by agreeing to pool both investment and technology in Terisa Systems. Terisa Systems' mission is to create the technologies that make secure Internet commerce possible.

Presentation Overview:

This presentation will outline a comprehensive security review process to help guide the audience in its efforts to initiate the critical dialogue between IS personnel and executive management on issues of computer security.

Speaker Background:

As a founder and Chief Technical Officer for Terisa Systems, Allan M. Schiffman has management responsibility for all technology development, is the company's technical visionary, and leads all security protocol design. Mr. Schiffman has fifteen years of experience in the software industry and is a recognized expert in Internet security. He is a regular speaker at industry and academic conferences, frequently holds lectures and tutorials on security, and holds a number of patents.
