3D MODELS

Vectorium 3D model collection,
Top Quality, Game Ready Models

Vectorium is pleased to present these high quality, low poly, game-ready models from the Vectorium 3D Model Library.

Vectorium models are easy to work with and fast to render. With very low poly counts you can fill a scene with dozens or hundreds of them for the same poly-cost as one or two equivalent high poly models. They're set up with standard materials and are optimized to look great without needing advanced lighting, shaders or rendering. The previews were scanline rendered and took roughly 30 seconds each.

We hope you enjoy working with these models. Our models are available from BlueBrain3D - please check back often for new models.
