

field

Field Many field

SAVE OLD RELATED ONE operates the same way as SAVE ELATED NE does, but uses the old relation to the field, to save the old related record. Before you use SAVE LD ELATED NE, you must load the record with OLD ELATED NE. Use SAVE LD ELATED NE when you want to save modifications to a record loaded with OLD ELATED NE.

SAVE LD ELATED NE will not save a locked record. When using this command, you must first be sure that the record is unlocked. If the record is locked, the command is ignored, the record is not saved, and no error is returned.
