

date

Date            Date for which to return the year

Year of returns a number indicating the year of date. The value returned is a four digit number.

The following example illustrates the use of Year of. The results are assigned to the variable Result. The comments describe what Result is set to:

```
Result := Year of (!12/25/92!)       ` Result gets 1992
Result := Year of (Current date) ` Result gets year of current date
```
