What Others Think

The following quotes are representative of what we typically hear from programmers using ViewIt.   The particular quotes were chosen to illustrate the wide range of programming environments in which ViewIt has been successfully used.

"The learning curve is very fast!   I used to program in OOP [class libraries].   The listings were without end.   I now use ViewIt with a small number of objects.   Life is much simpler!"
   H.M.A. Winand, Cambridge, England - Symantec C++ user

"I've seen everything, and I think that ViewIt is the best tool around for creating high-performance graphical interfaces involving many views and controls."
   Scott Haney, Livermore, CA - MPW C++ user

"ViewIt will completely change the way people think about programming...   It is the most innovative, creative, and useful tool for any programming environment I have used."
   Dr. R. P. Ingel, Washington, D.C. - Language Systems FORTRAN™

"ViewIt is ABSOLUTELY MARVELOUS!   The only real problem is sticking to our science, given all this new, elegant GUI power.   The neat active editing, too, is a constant temptation to add new and useful fun bits."
   Drs. John & Ann Thorson, Oxford, England - THINK C™ users

"I'm not a trained programmer. HyperCard® was a tremendously elevating experience, but I soon found there were...limitations...   Enter ViewIt.   This is, in my opinion, another quantum advance in Mac programming...and as my skill and requirements advance further, I have found ViewIt keeps apace, letting me override all control behaviour.   Keep up the great work!"
   Dr. David Darby, West Melbourne, Australia - THINK Pascal™

"I do not believe there is an adjective fantastic enough to describe your...programming toolbox.   This is the single, most impressive toolbox set or programming aid I have ever seen...   I have been programming for fourteen years now in BASIC, FORTRAN, Pascal, and C, and I do not believe there is a better interface toolbox anywhere."
   Andy Crews, Tyler, TX - Absoft MacFortran® II and THINK Pascal
