

SP Count voices -> count

count	integer	returns how many voices are currently installed in your application and/or System Folder. When no Speech Manager is available this function returns zero.
-------	---------	--

Returns the number of voices currently installed and available to the external.

The returned value can be used as the maximum index number which you can pass to SP Voicename.

Examples:

```
$count := SP Count voices
```

```
ALERT ("There are " + String(SP Count voices) +  
      " voice(s) installed.")
```

```
`since this number can be used as a limit of the index needed with  
`the Voicename function:
```

```
For ($i;1;SP Count voices)
```

```
  `do something here, like:
```

```
  $err := SP Voicename ($i;$voicename)
```

```
End for
```
