

SP Voice Cont (reference) -> err

reference    integer        specifys the channel you want to continue. Use  
the reference number obtained from the  
SP Open Voice function.

err            integer        returns the error which occurred.  
A value of zero indicates no error occurred. See  
below for a list of possible errors.

Function to continue the specified (paused) speech channel speaking the lines.

The SP Voice Pause, SP Voice Cont and SP Voice Stop functions are perfectly suited to make a row of buttons to play, stop, pause and continue the speech of the selected text in a text field.

When you pass reference value -1 all currently opened, paused speech channels will continue.

Example:

See the SP Voice Pause topic.

Possible errors:

0    No Error  
-4    Speech Pack can not be used (Speech Mgr not available)  
-3000    Invalid SpeechChannel parameter, probably invalid reference  
          number
