

SP Get Attr (reference; rate; pitch) -> err

reference	integer	specifys the channel you want to use. Use the reference number obtained from the SP Open Voice function. The channel must be open.
rate	integer	returns the rate in Words per Minute (WPM) currently used.
pitch	integer	returns the pitch in Hertz currently used.
err	integer	returns the error which occured. A value of zero indicates no error occured. See below for a list of possible errors.

Get the rate and pitch of the specified voice.

Example:

```
$err := SP Get Attr ($speechref;$rate;$pitch)
```

Possible errors:

- 0 No Error
- 4 Speech Pack can not be used (Speech Mgr not available)
- 3000 Invalid SpeechChannel parameter, probably invalid reference number
