

SP Voice Stop (reference) -> err

reference	integer	specifys the channel you want to stop. Use the reference number obtained from the SP Open Voice function.
err	integer	returns the error which occurred. A value of zero indicates no error occurred. See below for a list of possible errors.

Function to stop the specified speech channel speaking the lines.

The SP Voice Pause, SP Voice Cont and SP Voice Stop functions are perfectly suited to make a row of buttons to play, stop, pause and continue the speech of the selected text in a text field.

When you pass reference value -1 all currently opened speech channels will stop.

Example:

See the SP Voice Pause topic.

Possible errors:

- 0 No Error
- 4 Speech Pack can not be used (Speech Mgr not available)
- 3000 Invalid SpeechChannel parameter, probably invalid reference number
