SP Voice busy (reference) -> status

reference   integer   specifys the channel you the status from. Use
                            the reference number obtained from the
                            SP Open Voice function.
status   integer   indicating if the specified speech channel is still
                            busy speaking.
                -2   Reference is invalid (out of range)
                -1   Already closed or never opened
                 0   Finished
                 1   Busy
                 2   Paused
                (all other values are reserved for future use.)

Returns the status of the specified speech channel.

Example:
  $err := SP Voice String ($speechref;"Look who is talking!")

   `if an error occured this has no impact HERE.
  While (SP Voice Busy ($speechref) = 1)
    IDLE
  End While
