

Extend 3.0 Demo Installation

This program installs the Extend Demo into a folder named "Extend 3.0 Demo" on your hard drive. If no such folder exists, the Installer will create it.

Note: Virus protection programs, inits, and extensions may interfere with how the Installer program works. If you have problems during installation, you will need to disable inits and extensions. To do this:

- If you are using System 7 or higher, restart your computer and hold down the "Shift" key until the "Extensions Off" message appears.
- If you are using System 6, remove the inits from your system folder. Then restart your computer. After installation, be sure to return the inits to the system folder and restart your computer.

Drive button

The window to the right shows which drive is selected. For installation on a different drive, use the "Drive" button to locate the drive you want.

Install button

When you click "Install", the Installer will install the Demo files into the Extend 3.0 Demo folder.
