

Integrating Technology

into the Curriculum:

A Step by Step Process

Author: Miguel Guhlin

Internet: mguhlin@tenet.edu

Integrating technology into the curriculum isn't easy. I know because I've helped teachers do it, and have done it myself in my classroom. That's why this document is here. I've organized a collection of tips, hints, technology plans that have worked for me and other teachers I've trained.

You'll also find technology objectives, a list of educational software catalogs, technology/bilingual pamphlets, staff development proposals, a grant proposal, tips for using and organizing Hypermedia, a list of Kid Pix activities (thanks to Janet Sisson (jsisson@tenet.edu)), software piracy research, and tons of other stuff.

When you see my name after the title, you know it's been used on a campus. It's also copyrighted and may be reproduced so long as credit is given. If you use any of my stuff (technology plans, for example) or get any fantastic ideas, let me know by sending \$5.00 cash. I'll use that money to help me pay off this copy of DocMaker (or else my beloved wife will hit me over the head <sniff>).

I've also included some research I have found useful. No charge for their work, and you might want to e-mail them.

Send \$5.00 Cash to:

Miguel Guhlin
