

# Maker4 Macintosh FrameMaker Menu Configurations

This document is an edited form (using Nisus to remove the actual code syntax and definitions) of the `MakerMenus` file that comes with `ConfigUI`, which may be found on the `ftp.frame.com` site. This is one of a series of configuration files that allows one to modify the shortcuts and menus of FrameMaker.

I have made it available with absolutely no warranty or guarantee. Use it with the appropriate fear and trembling.

So far as I can ascertain from the source file and the documentation that comes with `ConfigUI`, the menu items preceded by "!" are reserved menu items that may not be modified.

"Add" statements have been deleted and the "Menu" statements changed to arrows to show where they are inserted by default.

This file seemed less useful than the others, but I have included it for completeness' sake. If you find any errors or omissions (two sins of which I am frequently guilty), let me know: `wilkins@wehi.edu.au`

John Wilkins
