

## ReadMe for CDCatalog.CW

This is a very simple database template for Claris Works 2.0.1 or later. It allows you to catalog your compact discs and then search, sort, etc. I was amazed that there are not many templates out for ClarisWorks so I figured I would share mine.

CDCatalog.CW is e-mail-ware. In other words, drop me a line and tell me how it is working for you. If you don't mind, include your city and state (country maybe?) so I can see how far this gets distributed. Enjoy!

Rather than giving long-winded instructions here, if you are new to CW--read the manual. It is fairly helpful in this area. You can skip the sections about defining fields and all since I have already done that. For those of you who are new, this is a preformatted "template" for the database function of CW. It has a place for you to type your data already set up.

I have no idea how this would work on System 6. In System 7, it should be stored in your stationary folder which is usually in the Claris folder within the System Folder. (**NOT** the one where you store your documents.) I am willing to help anyone who gets totally lost but if it is in the manual, I am going to send you right back to reading it. ;-)
