

# Read this first

These documents are lists of the commands and shortcuts of the Generic (Platform independent) and Macintosh-specific versions of FrameMaker 4.x. They are edited from the configuration files contained in `ConfigUI`, taken from `ftp.frame.com`:

`ftp://ftp.frame.com:outgoing/mac/configui.hqx`

The files ending in `.doc` are Macintosh Frame 4 binary files (type: `FASL`, creator: `Fram`). Those ending in `.pdf` are files for use with the Adobe Acrobat Reader. Versions of Acrobat Reader for most major platforms are available from `ftp.adobe.com` with neither cost nor licence difficulties.

No warranties or guarantees are offered. Caveat emptor/lector, etc. etc.

I hope they brighten up someone's life. I discovered things I had never heard of, so maybe you will too.

Cheers
