

About This Release

File Buddy 3.0 fixes a number of bugs found in previous versions, adds new capabilities and features designed to make File Buddy more powerful and friendlier to use. File Buddy 3.0 is also an "upgrade in progress", in that I had wanted more in it, but a number of bugs in version 2.2.1 were reported during the development of 3.0 and I have moved recently, so 3.0 has been released with fewer features than planned to make those fixes available sooner and get my new address out. Expect more releases in the future, with the understanding that if you register for any 3.x release, your code will work with all 3.x releases.

Planned Improvements:

Improved on-line help. A number of topics are not mentioned in this version.

A native PowerPC version.
