

- Troubleshooting

- Problem: It doesn't seem to work!
- Solution: Perhaps QuickPop has been turned off. Make sure the switch in the lower left of the window is in the on position.
- Problem: It causes problems with a certain application.
- Solution: From the preferences dialog you can create a list of applications that cause problems while using QuickPop. You can add the application to a list of excluded applications (see Customizing QuickPop above). If an application is on this list QuickPop will not be accessible from within that application.
