

About MathType 3.1

MathType is the intelligent mathematical equation editor for Windows and Macintosh. Using MathType in conjunction with word processing, desktop publishing, or graphics programs, you can easily create research papers, technical reports, tests, class notes, slides – even entire books!

How does MathType work? Use MathType by pointing and clicking (or use the keyboard) on over 280 mathematical symbols to write your equations, then simply transfer them into your document. MathType understands mathematics and the established rules of mathematical typesetting, automatically formatting your equations as you work.

Who needs MathType? University professors and school teachers use MathType to write tests, worksheets and papers. Students use MathType to write reports, homework and theses. Scientists, engineers and mathematicians use MathType to easily write equations for all types of technical documents.
