About Empower

Since its original release eight years ago, Empower has become the top choice for those needing a full featured security software for the Macintosh.

Magna is a recognised pioneer and innovator in the security software industry and creates powerful solutions for the security conscious business, education, scientific, engineering and government customers world-wide.

EMPOWER...
offers convenient options for protecting and releasing hard drive volumes.   Administrators can save Users, Groups, and Preferences, temporarily release Empower, and quickly restore their saved security configurations.   Users can optionally release all Empower-protected volumes or protect several volumes with the same security configuration, all at the same time.
Installation is quick and easy.   Once installed, only the names and passwords the user assigns will allow access.

Empower prevents the use of a start-up floppy, and automatically secures the system and blanks the screen with your choice of AfterDark or Magna's built-in screen saver.   Access logging and auditing tracks who has used the Macintosh and when.
Selected files can be password-protected with Magna's very fast proprietary encryptor, Magna-Crypt (DES is not available outside the USA).

EMPOWER Professional...
allows privileges to be assigned to specific users and groups.   It also controls who can gain access to the System Folder, Apple Menu Items, Control Panels, individual applications, and individual folders.

Version 5.1 locks and copy protects applications and files while allowing co-workers to share a Macintosh without compromising data, privacy, or peace of mind.

The Super Administrator level that allows for custom configuration settings has been added.   This feature has been requested by many corporate sites so they can meet a variety of security guidelines.

Empower – £129 + VAT.
Empower Pro – £219 + VAT.
