CAPTURE, ORGANIZE AND CONTROL YOUR INTERNET WORLD

WebArranger

Your Internet Organizer

Today, everyone maintains a Web page—from Fortune 500 companies to magazines, to universities. Even hospitals and rock bands are getting on-line. No doubt a communications revolution.

And whether you diligently watch each move your competition makes or the highs and lows of a particular stock, the facts are clear. You need the latest information, and you need it now!

Unfortunately, there are some dangerous pitfalls in having the Internet's limitless world within your grasp. Namely, falling victim to the information avalanche.

To minimize that possibility, you need more than data access. You need the power to capture, control and organize your Internet world—your way. If you frequent even one Web site, and are all too often buried alive by the information onslaught, WebArranger™ will rescue your time, plus keep you in the know on the latest changes to all of your favorite Web sites.

Unlimited Web Sites Monitored, Automatic Change Notification Delivered

CE Software's WebArranger combats information overload, delivering you a set of robust organizational features, including the power to automatically monitor your favorite Web sites for changes and then tell you when they occur. With only two mouse clicks you instantly go to that Web page via your favorite browser. In fact, WebArranger supports popular Web browsers, including Netscape Communication, Inc.'s Navigator™, as well as those using standard Internet AppleEvents®.

Single Location for Information Gathered From the Internet and Other Data Sources

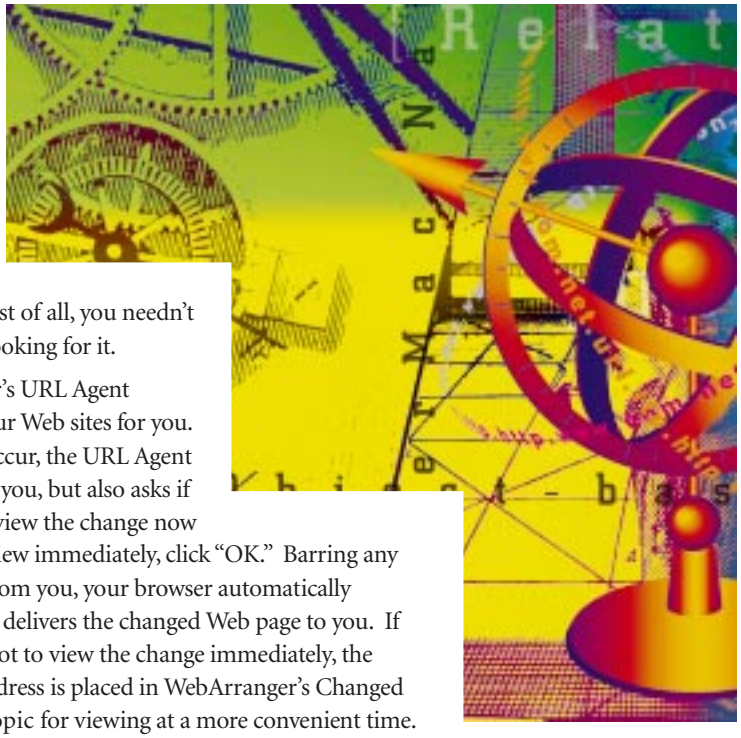
By leveraging WebArranger's robust information organizer you can capture, store and manage Web page data. WebArranger not only receives all the information you want from the Internet, it also stores it in one convenient place, enabling you to organize and arrange it in a way that makes sense to you.

WebArranger's powerful object-oriented database capabilities also allow you to capture and store information from other sources such as word-processing documents, mail messages, databases, spreadsheets, contacts, etc., and integrate them with your Internet information. With WebArranger you have one place for all of your day-to-day data. And WebArranger's powerful linking capability lets you easily tie differing information types together for easy access or quick reference.

Robust Information Management

WebArranger provides an extensive and highly customizable contact manager that's fully capable of storing all of your business and personal contacts. To

CE SOFTWARE



quickly find a contact, sorts may be performed by company, the contact's last name or by further segmenting the contacts into sections of the alphabet. WebArranger even includes a full forms package for creating labels, index cards and envelopes, all fully supported by a powerful print engine.

With WebArranger's built-in forms editor, you can easily create graphical templates for any specialized information type in minutes. The forms can be as simple or as complex as you need. Anything from a simple form displaying phone extensions to a more complex template outlining all the details necessary for planning a major event.

Automatic Notification of Internet Changes

Imagine how much time you spend each day searching through your favorite Web sites for new information. With WebArranger you simply delegate this time-consuming task to the application's URL Agent. This breakthrough agent technology enables you to maximize your limited time, yet you still receive all the latest information you need. Best of all, you needn't spend time looking for it.

WebArranger's URL Agent "watches" your Web sites for you. As changes occur, the URL Agent not only tells you, but also asks if you'd like to view the change now or later. To view immediately, click "OK." Barring any interaction from you, your browser automatically launches and delivers the changed Web page to you. If you choose not to view the change immediately, the site's URL address is placed in WebArranger's Changed Web Pages Topic for viewing at a more convenient time. The URL Agent can watch your Web sites for changes as often as every few minutes or as little as once a week. It's completely up to you.

Web Site Location Changes

Many Web sites change their location or cease to exist. When a Web site that you access moves or is no longer active, you need to know it. With WebArranger's

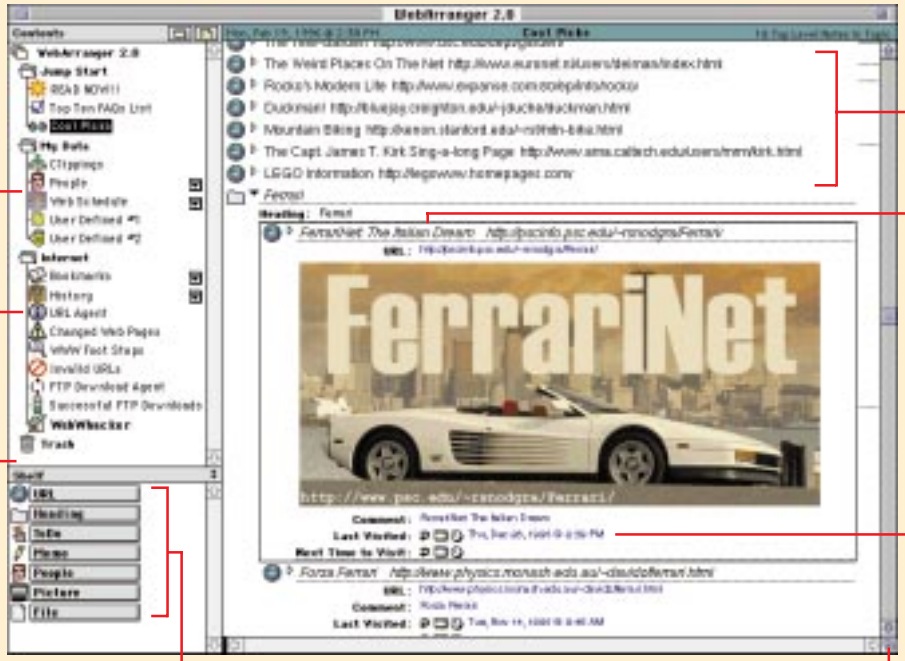
WebArranger organizes your information in a freeform, easy-to-navigate outline format.

Customize WebArranger to work the way you do. Define your own Topics and assign icons from a provided library.

WebArranger boasts extensive personal organizer functionality. Contacts, calendars, ToDos and alarm reminders are just the beginning. It will even import existing contact information from a wide variety of popular organizer programs.

The URL Agent will monitor important URLs for you at intervals you define. To put a URL in your "hot list," simply drag and drop the URL to the URL Agent icon.

Drag and drop your information items just as easily as you do with files on the MacOS desktop. There's even a trash can, from which items can be rescued.



WebArranger provides a library of information types called Notes (like Contacts, ToDos, URLs, etc.) Place your most commonly-used Note types in ready reach on WebArranger's Shelf. You also can define your own or customize the ones given.

It's easy to share your collection of Web sites with other WebArranger users using WebArranger's rich import and export capabilities.

Do you like using a larger monitor? So does WebArranger. It'll use whatever you've got to give you as large a view of your Internet world as you want.

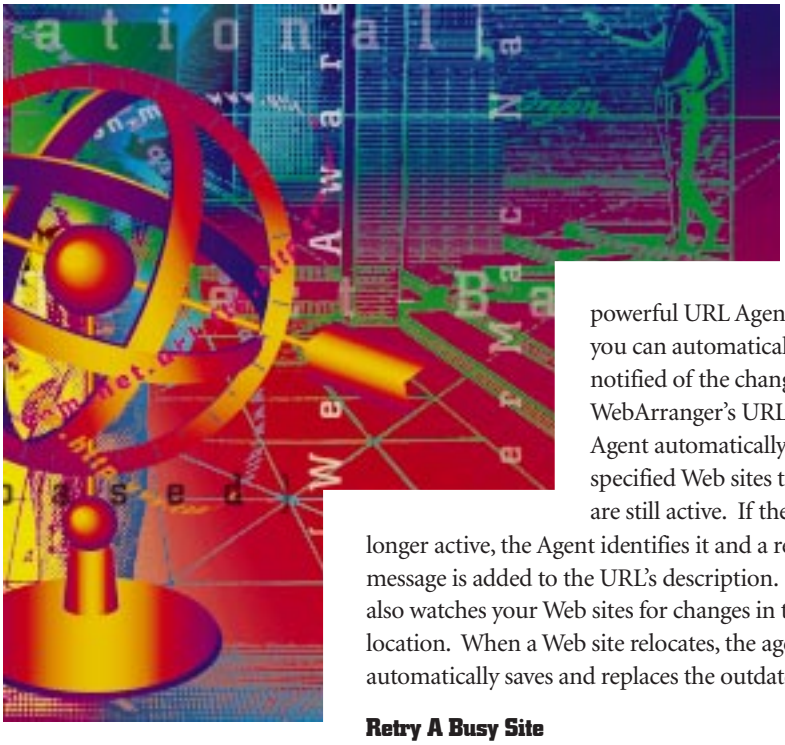
Store and organize URLs in customizable, hierarchical file folders. To launch any URL (via your browser), simply highlight it and type Command-R, and you're there.

No more scratching your head over those cryptic URLs. You can easily annotate them with titles, comments, graphics, and more. WebArranger will even record a time-stamp for all of your Web site visits.

WebArranger will import (and export, if you like) your existing bookmarks. It'll also record your browsing history in case you want to return to a site you may have forgotten to mark.

Your Internet world is vast — WebArranger allows you to open multiple windows on the same WebArranger file.

WebArranger's powerful object-oriented database engine lets you sort your information in just about every conceivable way. You can also link contacts to URLs to calendar appointments, and so on.



powerful URL Agent technology, you can automatically be notified of the change. WebArranger's URL Validator Agent automatically checks your specified Web sites to see if they are still active. If the site is no longer active, the Agent identifies it and a resulting error message is added to the URL's description. The agent also watches your Web sites for changes in their location. When a Web site relocates, the agent automatically saves and replaces the outdated address.

Retry A Busy Site

There are few things as frustrating as setting aside time to download a file from an FTP (File Transfer Protocol) site only to be notified that the "server is busy, try later." WebArranger's Download Agent eliminates this frustration by enabling you to set the agent to automatically retry busy FTP sites at specific intervals, for example, once every hour. This retry action will repeat until a file has been downloaded successfully.

Capturing Internet Data

Once you've seen the world of accessible information on the Internet, you know that browsing data is one thing, using it is quite another. To make Internet information useful in your daily life, you need the ability to capture it. WebArranger's Universal Grabber™ technology enables you to "grab" or capture desired text and graphics with a single keystroke—whether it's a URL address, a news release or the game schedule of your favorite hockey team. The data imports into and displays correctly in WebArranger, allowing you to organize it and use it whenever you need it.

Off-Line Internet Browsing

Browsing the Internet off-line? Impossible, you say. Not any more. To enable you to browse the Internet even when you're not connected, CE Software now includes The ForeFront Group's Web site capturing application WebWhacker™ in WebArranger. With WebWhacker you have the ability to "whack" or copy multiple Internet pages or entire Web sites to your hard drive. Once captured, you can organize, manage and arrange the Internet information with WebArranger just as you would if you were on-line. WebWhacker and WebArranger provide you with a timely and cost-effective way to browse the Internet even while you're disconnected.

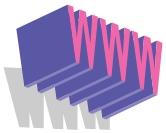
Tracking Foot Steps

Have you ever visited a Web site, then forgot the address when you wanted to go back to it? Keeping an accurate record of the Internet sites you've visited is easy with WebArranger's WWW Foot Steps. When activated, WWW Foot Steps keeps track of the Web sites you visit. Should you need to follow the same path or access any one of these sites later, simply open the WWW Foot Steps folder and with no more than two clicks of your mouse, you're there.

Annotate Web Site Addresses

Even the most experienced Internet surfers know how confusing and cryptic many URL addresses can be. It's not uncommon to find addresses that provide no hint as to what they reference. With WebArranger, however, you can annotate URL addresses with titles, text comments, pictures and more for instant identification.

Managing Netscape Bookmarks

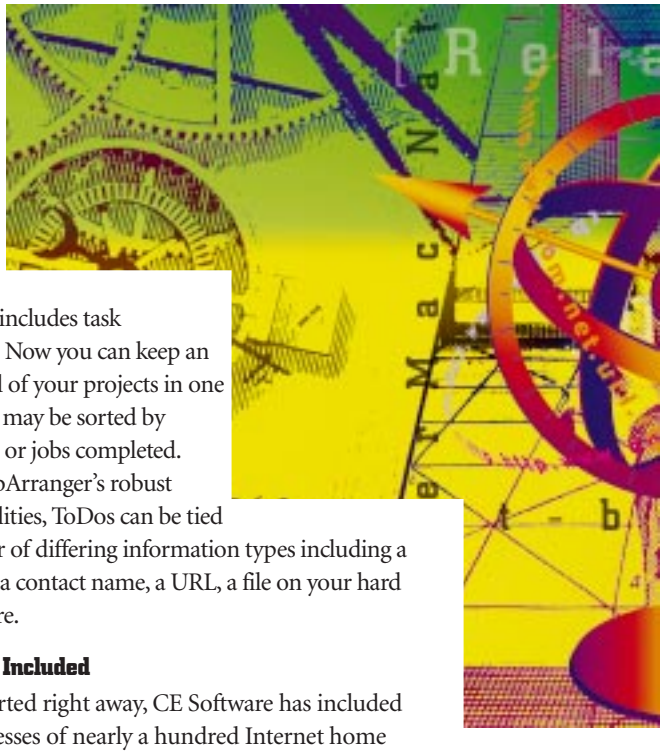


Managing your Netscape Navigator Bookmarks can be a nightmare. As you bookmark more and more sites, your list can grow completely out of control. To get a handle on your teeming list of Netscape Bookmarks, simply import them into WebArranger. Once there, WebArranger automatically formats and annotates them as a URL reference. Now you can easily "drag and drop" them into hierarchical, easy-to-organize folders. Exporting your reorganized bookmarks from WebArranger to Netscape is also supported.

Sorting URLs

WebArranger makes it easy to find specific URLs from among the hundreds you've stored. With minimal effort and maximum results, WebArranger's powerful sorting engine will sort and list your URLs in just about every conceivable way. Sorts can be conducted by a wide variety of criteria, including sites last visited (in either ascending and descending order), Yahoo, Gopher, FTP, http, .edu, .com, .org, or Apple sites. And since WebArranger automatically time-stamps your site visits, you can sort URLs in a calendar format which allows you to view a "diary" of your past site visits by month, week or day.

WEBARRANGER



Alarm Notification

Every third Tuesday of each month you'd like to check your Macintosh user group's Web site to get up to speed on the latest news. Unfortunately, something always seems to come up and you forget. With WebArranger's built-in alarm reminders, you'll never forget again. Just set the alarm and WebArranger will tell you when it's time to visit a Web site. The alarm function also may be linked to any information type including scheduled appointments, contacts or dates — reminding you of specific tasks or ToDos. The alarm will notify you even if you're using another application or if WebArranger is not running.

Support for Internet Applications

WebArranger fully supports all of your favorite Internet applications including Web browsers, FTP clients, Gopher clients, mail clients and more, using the industry-recognized (and included) Macintosh® Internet Config utility.

Customized Calendar

Included in WebArranger is a completely customizable calendar that displays a wide variety of information types, including appointments, contacts, URL addresses and more. The calendar may be molded to meet all of your needs and can be viewed and navigated by a number of daily, weekly, and monthly views. The calendar also supports repeating, non time-labeled, and automatically carried-forward events.

Sending and Receiving Internet E-Mail

If you use the Internet to send and receive E-mail, WebArranger will manage your growing number of E-mail addresses. WebArranger makes it possible to store and annotate your E-mail addresses for easy identification and quick access. These addresses can even be set to automatically pre-fill the MailTo: field when they are selected and launched — WebArranger works seamlessly with your Internet E-mail application.

Task Management

Every day, your list of things that must get done grows, and there's no end in sight. To stay on track and on time, WebArranger includes task management. Now you can keep an active list of all of your projects in one place. Projects may be sorted by priority, status or jobs completed. Plus, with WebArranger's robust linking capabilities, ToDos can be tied to any number of differing information types including a calendar date, a contact name, a URL, a file on your hard drive, and more.

Web Listings Included

To get you started right away, CE Software has included the Web addresses of nearly a hundred Internet home pages. From highbrow news to outright silliness, you're sure to find something of interest. To view any of them, simply highlight the site listing and perform one easy keystroke. WebArranger will load the URL into your browser and launch it. It's that easy. Once you've untangled your Web with WebArranger, you'll wonder how you ever browsed without it.

Object-Oriented Power

WebArranger was designed with the future in mind. Because of its object-oriented design, new and useful functionality can be added to the existing application via WebArranger's Plug-in architecture. Through the Plug-ins, CE Software and third party developers can add vertical WebArranger applications that serve specific information management needs in the areas of education, home, medicine, sales, manufacturing and many more. Stay tuned to CE Software's World Wide Web site for news on available WebArranger Plug-ins and Software Development Kit (SDK).
