

E-mail Server for Larger Microsoft® Windows® NT® Environments

For Windows NT

Powerful E-mail server solution for enterprises

Ideal for high-volume E-mail environments

Unmatched scalability and security

Works with any POP3/SMTP client

Overview

If you're looking for a "no excuses" E-mail server that will exceed the demands placed on your electronic mail system—look no further than Software.com's Post.Office™.

Post.Office is the leading POP3/SMTP E-mail server for larger Windows NT organizations or enterprise environments. A powerful E-mail server, Post.Office was developed to meet the open standards and protocols of the Internet.

Post.Office's performance is unmatched in meeting the demands of today's corporate Internet/intranet E-mail managers. Whether you're supporting 1,000 or 100,000 users, Post.Office is reliable, efficient and flexible.

Easy to Use and Administer

Post.Office offers an intuitive, easy-to-use interface. There's no programming to perform. No configuration files to edit. And no unfamiliar syntax to memorize. It's a breeze to learn as you go with Post.Office's simple instructions guiding the way. With Post.Office's fill-in-the-blank forms, pop-up options and hypertext help links, you'll be amazed by the amount of power you can access so simply. Best of all, users may manage certain aspects of their own accounts, so you don't have to.

Gain Control Over System Resources

Post.Office offers a variety of configuration options enabling you to efficiently manage your system resources. With Post.Office, you determine the limits and parameters for SMTP and POP3 processes, system- and account-level POP3 mailbox size, system-level message size and minimum free disk space.

Scalability You Can Count On

E-mail systems frequently expand beyond the capacities originally envisioned for them. As demands increase and more and more users are added, you need a server solution that grows with your organization—not one that stops functioning when it reaches its maximum number of users. With its ability to support more than 100,000 users, Post.Office delivers the scalability your organization requires.

Remote Administration Capabilities

A server's flexibility and compatibility within diverse network environments is a must. Post.Office's full compatibility with

Windows NT assures that flexibility. Plus, as the administrator, you can configure Post.Office from any remote location via a Web browser on the machine of your choice.

Security-Conscious Server

Protecting your network from intrusion is a business reality. To meet the concerns of security-conscious sites, Post.Office is designed to operate independent of the host computer system. With Post.Office, it's virtually impossible to breach your company's network via the electronic mail program.

Post.Office provides a host of security features. It automatically sends warning messages when suspicious activities are observed. Several password protection levels exist for configuration, account changes and E-mail retrieval. User access to specific domains or hosts is determined on a case-by-case basis.

Complete Client/Server Solution

Piecing together an E-mail system—a server from one supplier, a client from another—is time-consuming and difficult. Why not get everything you need from one vendor?

CE Software's QuickMail Pro/Post.Office bundle provides everything you need to set up a complete E-mail solution. It combines CE Software's QuickMail Pro client software with Software.com's Post.Office server.

QuickMail Pro Client Software

QuickMail Pro, a POP3 E-mail client, delivers an easy-to-use interface, as well as powerful features including:

- Native support for Windows 95/ NT and Mac™ OS—all with the same look and feel.
- Directory services for Finger, Ph and LDAP—find E-mail addresses fast.
- Automatic filtering of incoming messages—reply, forward, file, even delete messages based on your criteria.
- Built-in spell checking—error-free communication.
- Customized E-mail forms—automate business processes with the included forms or create your own.
- Auto-encode attachments to match each recipient's computer—Windows, Mac OS and UNIX—share files that are readable upon arrival.
- Stylized text—add emphasis to messages by changing the font, style, size and color.
- World Wide Web integration—send messages from your Web browser using QuickMail Pro.
- Auto-installation of address books and groups—eliminate returned mail and bad addresses.

One Stop for All Needs

With the QuickMail Pro/Post.Office combo you have a single point of contact for everything you need. Whether it's additional software, technical support or customer service—CE Software is there for you.

Keep Everyone Informed With Built-in List Manager

Creating and maintaining mailing lists can be tedious. Not so with Post.Office. Its List Manager offers quick creation and easy administration of thousands of mailing lists. Its List Manager provides unprecedented flexibility, control and usability.

Post.Office's List Manager is designed to facilitate the mailing list process at every level—whether it's the administrator, list owner or individual subscriber. Post.Office allows list owners to set a wide range of subscription and posting policies, moderate messages and

modify most of the attributes of the list. All list-related operations can be performed through a Web browser interface, E-mail forms or a combination of both. Access is password protected. Subscribers can use either a Web or an E-mail interface to review or subscribe to mailing lists, change delivery modes and perform search functions.

Command Line Utilities

Post.Office offers a command line interface as another means of interacting with the mail server. This utility allows multiple account and list maintenance operations to be handled in a single transaction. Supported operations include the addition, retrieval, modification and deletion of E-mail account and mailing list information.

Respond Automatically

Imagine being able to generate an automatic response to customer E-mail requests. You can with Post.Office's auto reply. Use it to fulfill requests for more information or to deliver E-mail on demand. The auto reply feature can distribute requested files to customers electronically and automatically. It can even be used to answer frequently asked technical support questions, freeing up your help desk staff.

Works With Your Choice of POP3 E-mail Clients

Whether everyone within your organization uses the same E-mail application or a host of different ones, you can use Post.Office as your server for all of them. Post.Office works with nearly every E-mail client that supports Post Office Protocol, version 3 (POP3), including QuickMail Pro, Eudora Pro, Agent, Pegasus, Z-Mail, Netscape, Microsoft Exchange (with the Internet Mail Extension), Microsoft Outlook and more.

Minimum Requirements

Post.Office Server for Windows NT

Hardware: Windows NT Workstation or Server. An Intel compatible 486 or Pentium processor, or a MIPS RISC processor, or a Digital Alpha AXP RISC processor. (Multiprocessors are supported.) 20 MB of System RAM (32 MB recommended).

Software: Post.Office must be installed on a host running Windows NT version 4 and Service Pack 2. (Windows NT version 3.5.0 is no longer supported.) A TCP/IP network with TCP/IP installed on the host. If connected to the Internet, a DNS server listing the site's "A" and MX records. If you're not connected to the Internet, use either DNS or the HOSTS file for name resolution within the local network. A Web browser is required. Mail Client with Post Office Protocol, version 3 mail pickup (POP3).
