QuicKeys®

Create Automated Shortcuts For
Everyday Tasks

Access Routinely Used Files,
Folders And Programs — Fast

Make Universal Keystrokes
For All Of Your Applications

Modify Files In Batches
With One Keystroke

Single-Click Shortcuts
With Floating Toolbars

Automation Power at Your Fingertips

QuicKeys® dramatically reduces time and effort spent on your Mac by automating all of your most routinely performed, multi-step operations — on demand, in every application! QuicKeys extends the functionality of the Mac™ OS, providing a timesaving automation toolbox across your entire computing environment. So whether your specialty is tweaking pixels or crunching data, your everyday productivity soars.

Flexible Shortcuts

If you regularly use keyboard shortcuts to speed your work, you've probably been frustrated by the "lack of a hotkey" for a function or dialog box you access most often. With QuicKeys, you can create and edit your own customized set of shortcuts for each and every application, and they're always immediately accessible from your keyboard or mouse.

The Power of Sequences

You can record a series of actions in any application, edit or tweak any step in that series, then assign a keystroke to automate the entire sequence. It's that easy. The sequence you record can range from the simple, like typing your name and address, to the complex, like manipulating ink saturation levels in a set of TIFF files. QuicKeys is even able to note pauses and waits in a sequence, and act accordingly. Once you've recorded a sequence, it's easy to go back and edit any individual step as needed.

NEW! Batch Processing

QuicKeys turns all of your applications into batch-processing powerhouses. With QuicKeys 3.5, you can apply your recorded sets of instructions to an entire folder full of files. Optimize your collection of Web graphics or re-format a year's worth of spreadsheets in minutes, hands-free. Frame-by-frame animation is now possible in your graphics application of choice.

Get Up to Speed in a Flash

When you use QuicKeys shortcuts, there's no cryptic programming language to learn. Easy-to-use sequence recorders and editors make the automation process fast and intuitive. In no time, you'll be customizing all of your applications to work exactly the way you do — only faster.

NEW! Floating Shortcut Palettes

You can assign your shortcuts to keystrokes, mouse clicks, or both with QuicKeys' floating shortcut palettes. They provide one-click visual access to recorded shortcuts via a familiar palette interface. You'll find that QuicKeys extends the functionality of applications just like "Plug-In" software. The only difference is that QuicKeys works with *all* of your applications!

Universal Shortcuts

If you use your Mac for graphics or desktop publishing, you've probably found that each application has its own shortcuts for the same operation. For example, "zoom in" in one application is ⌘-[and in another it's ⌘— . With QuicKeys, you can create your own set of universal shortcuts that behave identically across all applications. The next time you buy an application, you won't have to learn 15 new keyboard shortcuts — instead give it the keystrokes with which you're already familiar!

Share the Productivity

QuicKeys makes it easy to share your useful shortcuts with other QuicKeys users. If you'd like to share the process you used to create a fancy edge around a graphic, for instance, simply record the sequence, export it, and send it. Or use QuicKeys to automate data entry for an entire room of

A "MUST HAVE"
FOR GRAPHICS USERS &
DESKTOP PUBLISHERS!
Includes timesaving keysets for Illustrator,®
PageMaker,® Photoshop™ FrameMaker®
and many more.
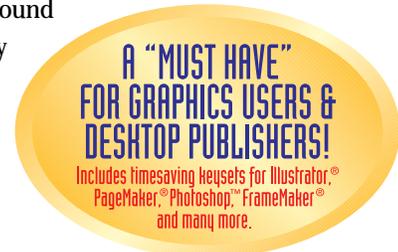

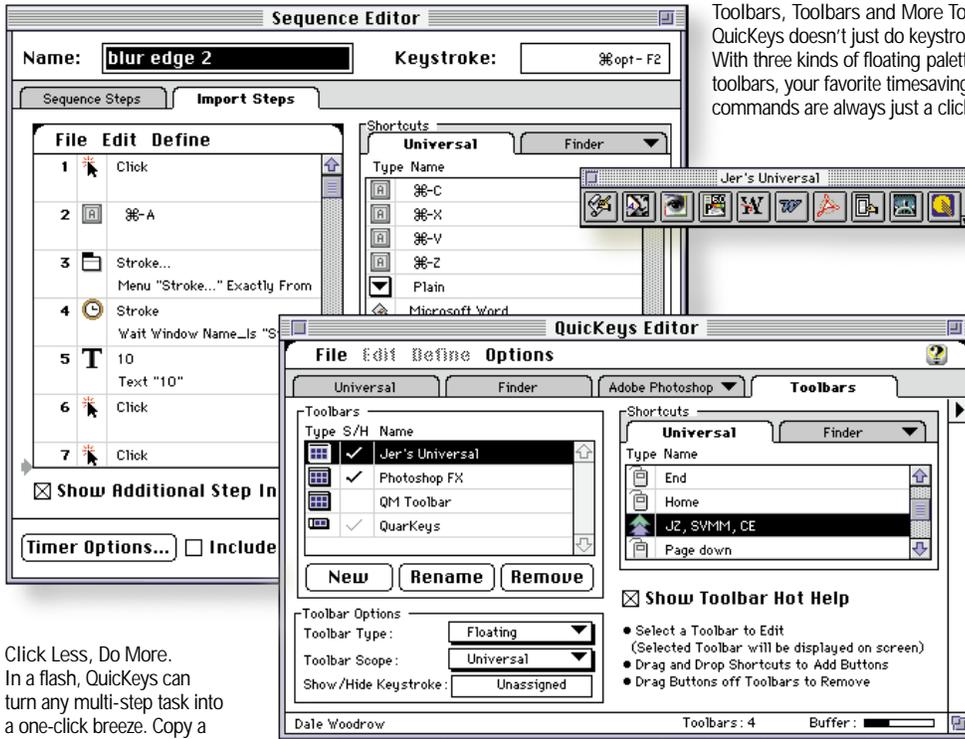

Toolbars, Toolbars and More Toolbars. QuicKeys doesn't just do keystrokes! With three kinds of floating palettes and toolbars, your favorite timesaving commands are always just a click away.

Click Less, Do More.
In a flash, QuicKeys can turn any multi-step task into a one-click breeze. Copy a database record, paste it into a document and print without retyping a word.

Pull A Quick-Switch.
It's the end of the password blues. Any commonly used server, volume, or printer is just a click away. No passwords to enter. No Chooser to choose. Just click and go.

Master Your Mac.
It's your Mac … make it work the way you want! When "command-M" does one thing in one application and something else in another, it's easy to make it perform the same operation in any application.

A Bunch of Batchin' Speed.
Image warriors and pixel fixers will save hours! With the new Batch Processing feature, it's easy to design a process that opens all the files in a folder with Photoshop® (or any graphics application), reduces the palette, then saves in JPEG … no scripting required!

---

phone representatives. Why keep your shortcuts to yourself when the whole office can benefit?

QuicKeys Features:

- Simple Menus — Change your preferences without digging through a maze of menus.

- Flexible Windows — Tab-based, or drag-and-drop editing make working with QuicKeys easier.

- "No-Hassle" Scripts — Record scripts without errors and edit them easily.

- Automatic Phone Dialing — Create timesaving shortcuts that dial on-line services, BBS or E-mail systems automatically.

- Truly Helpful Help — You'll hardly need it, but if you do, context-sensitive help is on-call with a click.

- Total Compatibility — Works with all the most popular applications and MacOS versions from 7.5 up.

Special Features for PowerBooks®

QuicKeys 3.5 lets you create special keysets that make your smaller keyboard work like an external numeric keypad. That means less equipment to carry, and longer battery-life on the road!

System Requirements:

- Apple Macintosh® II or later, Power Macintosh® or compatible

- MacOS 7.5 or later

- Minimum 8MB of System RAM

- Hard drive
