Troubleshooting

Some frequently asked questions

This quick reference provides answers to some common problems that may occur when using MiniCalendar. If your question is not listed here, please contact us for further assistance.

Version History

Version 2.0
- Removed support for the now defunct Better Beeps.
- MiniCalendar now supports Kaleidoscope / Aaron color schemes.
- Users can enhance the display of MiniCalendar by using the system utility pattern
- Added support for MacOS 8.0
- Increased reliability in low memory situations
- Now includes Catara™ Registration System
- Various other improvements and bug fixes

Version 1.1
- Added support for Better Beeps.
- Added Macintosh Drag and Drop.
- There is now an Applescript dictionary.
- Fixed a bug that caused text in the "Set Date" dialog not to be copied or pasted.
- Fixed a problem that could cause the cursor to be changed at random.

Version 1.0
- Initial public release

Frequently Asked Questions

How do you change the Utility pattern?

Using System 7.5.x or System 7.6.x:

1) Open the Desktop Patterns control panel
2) Choose the pattern you want to use as the Utility Pattern
3) Hold down the Option key, the "Set Desktop Pattern" button will change to "Set Utilities Pattern"
4) Click on the "Set Utilities Pattern" button

If you are a MacOS 8.0 user, and you still have the System 7.5.x or 7.6.x Desktop Patterns control panel, this technique will still work, although it is unsupported by Apple.

My license code doesn't work, am I doing something wrong?

Your license code is based on the licensee name.   You need to make sure to enter the licensee name and license code exactly as it was sent to you.   If you have any problems, please contact us.
